

## Physics Final Study Guide

### Chapter 1

- Scientific Methods
  - Fact- generally a close agreement by competent observers who make a series of observations about the same phenomenon
  - Hypothesis- an educated guess that is only presumed to be factual until supported by experiment
    - To distinguish whether a hypothesis is scientific or not, check to see if there is a test for proving it wrong; if there is no test, then it is not scientific
  - Law- when a hypothesis has been tested over and over again and has not been contradicted
  - Theory- a synthesis of a large body of information that encompasses well-tested and verified hypotheses about certain aspects of the natural world
    - Evolve as they go through stages of redefinition and refinement

### Chapter 2- Newton's First Law of Motion- Inertia

- Aristotle on Motion
  - Aristotle divided motion into two main classes: natural motion and violent motion
    - Natural motion
      - Proceeds from the "nature" of an object, dependent on the combination of the four elements (earth, water, air, and fire)
      - Every object in the universe has a proper place, determined by its "nature"; any object not in its proper place will "strive" to get there
    - Violent motion
      - Results from pushing or pulling forces; imposed motion
  - Taught that all motions are due to the nature of the moving object or due to a sustained push or pull
- Galileo's Experiments
  - Leaning Tower
    - Galileo easily demolished Aristotle's falling body hypothesis
    - Dropped objects of various weights from the top of the Leaning Tower of Pisa to compare their falls
    - Found that a stone twice as heavy as another did not fall twice as fast
    - Except for the small effect of air resistance, objects of various weights,
