#### Conceptual Questions

**13.1. An electrified rod attracts pieces of paper. After a while these pieces fly away! Why?**

Suppose a glass rod is rubbed with silk, it becomes positively charged (an electrified rod). When this glass rod is brought close to the pieces of paper, by electrostatic induction, a negative charge appears on pieces of paper due to which these pieces of paper attracted towards the rod. But when these pieces of paper touch the charged rod, some of electrons from the pieces of paper are transferred to the glass rod and then pieces of paper also become positively charged, due to which there will be the force of repulsion between rod and pieces of paper, hence the pieces of paper fly away from the rod.

**13.2.- How much negative charge has been removed from a positively charged electroscope if it has a charge of  $7.5 \times 10^{-13} \text{ C}$  ?**

$7.5 \times 10^{-13} \text{ C}$  of negative charge has been removed from an electroscope to produce a positive charge of  $7.5 \times 10^{-13} \text{ C}$  on the electroscope.

**13.3. In what direction will a positively charged particle move in an electric field?**

In an electric field positively charged particle will move from a point of higher potential to a point of lower potential i.e., the positively charged particle will move in the direction of electric field.

**13.4. Does each capacitor carry equal charge in series combination? Explain.**

Yes, each capacitor carries equal charge in series combination. When capacitors are connected in series, the same amount of charge flows through each capacitor. Therefore, each capacitor carries equal charge.

Yes, each capacitor carries equal charge in series combination. When capacitors are connected in series, the same amount of charge flows through each capacitor. Therefore, each capacitor carries equal charge.

In a series combination of capacitors, the same amount of charge flows through each capacitor. Therefore, each capacitor carries equal charge. This is because the capacitors are connected in series, and the same amount of charge flows through each capacitor.

Theory , **Modern Take On Physics, A - Volume 2: Classical And Quantum Field Theory** Giovanni

Organtini,Graziano Surace,2025-03-17 These two volumes cover the classical topics typically taught in undergraduate physics courses and beyond However we teach classical physics using a very different language from traditional books influenced by the language of modern physics in a move to encourage a positive approach towards the latter subject Based around the unifying concept of energy we take a distinct approach to the organisation of material presenting physics in a cohesive manner without separating topics such as mechanics kinematics thermodynamics electricity and magnetism Instead physics is revealed gradually emphasising a holistic approach to science Despite this peculiarity we have maintained the conventional separation between Physics I and II to assist teachers in smoothly integrating these books into their courses These innovative volumes present valuable new perspectives Although their approach is bold they will certainly prompt interesting reflections on traditional teachings A significant portion of this second volume is committed to modern physics including an introduction to the standard model of fundamental interactions The old quantum mechanics is largely excluded in favour of quantum field theory which we present in a manner accessible to undergraduate students (Free Sample) GO TO Objective NEET Physics Guide with DPP & CPP Sheets 9th Edition Disha Experts,2021-10-05 The thoroughly revised updated 9th Edition of Go To Objective NEET Physics is developed on the objective pattern following the chapter plan as per the NCERT books of class 11 and 12 The book has been rebranded as GO TO keeping the spirit with which this edition has been designed The complete book has contains 28 Chapters In the new structure the book is completely revamped with every
