Design of Reinforced Concrete Silo Groups Fernando A.N. Silva, Bernardo Horowitz, João M.P.Q. Delgado, António C. Azevedo, 2019-06-21 This book offers a new calculation procedure of the structural behavior of grouped layout of silos easy to use and with satisfactory responses Groups of reinforced concrete silos are structures commonly used in the food industry where it is usually necessary to separate the storage of different types and sources of grain The grouped layout of silos has numerous benefits when compared with single cell silos in which the emphasis is on creating further space for silage normally referred to as interstice a space formed between the edges of the group s cells This economic benefit on the other hand raises a structural problem for the designer of this type of building which is to assess the magnitude of bending moments and hoop forces due to the structural continuity of the walls in the interstice region of the cells Bending moments assume extreme values exactly when the interstice is loaded and the other cells in the group are empty To develop the formulation of the proposed analysis models a parametric study was carried out that allowed the adequate consideration of the variables involved The idea is to help professionals engineers industrials and academics involved in this advanced interdisciplinary field as a comprehensive guide for courses offered at different levels of learning undergraduate and postgraduate

Concrete Adam M. Neville, 2006-05-26 A book on concrete that looks at a problem or an issue and discusses the underlying scientific and technological aspects including broader contextual topics It explains how closely we can determine the water cement ratio of hardened concrete and considers whether we can verify the age of cracks by measuring carbonation

Silos C.J. Brown, J. Nielsen, 1998-05-21 Bringing together the leading European expertise in behaviour and design of silos this important new book is an essential reference source for all concerned with current problems and developments in silo technology Silos are used in an enormous range of industries and the handling characteristics of many industrial materials require different approaches for successful economical installations For the first time the many approaches taken by specialists in different fields are brought together in a unified way so that common problems can be addressed This book is the result of a four year European project Concerted Action Silos funded under the Brite Euram programme which has involved over 100 expert engineers and researchers from all over Europe in seven working groups

Guide for Protection and Repair of Concrete Structures FIB - International Federation for Structural Concrete, 2022-03-01 The idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib COM5 Structural Service Life Aspects being the goal of the then TG5 9 After a long period of reduced activity and taking into account the reorganization of fib commissions that meanwhile took place on June 2017 a different approach was proposed to push forward the task of TG8 1 formerly TG5 9 The new goal of TG 8 1 was to deliver a how to do guide gathering together protection repair and strengthening techniques for concrete structures Chapters are intended to provide both guidelines and case studies serving as support to the application of fib MC2020 pre normative specifications Each chapter was written by an editorial team comprising desirably at least a researcher a designer and a contractor Templates have been prepared in order to harmonize the contents and the presentation of the different methods Following the writing process chapters were reviewed by experts and after amendments by the authors they underwent a second review process by COM8 and TG3 4 members as well as by different practitioners For each protection repair and strengthening method addressed in this guide readers have a description of when to adopt it which materials and systems are required which techniques are available and what kind of equipment is needed It then presents a summary of stakeholders roles and qualifications design guidelines referring to most relevant codes and references the intervention procedure quality control measures and monitoring and maintenance activities Due to the extent of the guide it was decided to publish it as bulletin 102 addressing protection and repair methods and bulletin 103 addressing strengthening methods We would like to thank the authors reviewers and members of COM8 and TG3 4 for their work in developing this fib Bulletin which we hope will be useful for professionals working in the field of existing concrete structures especially those concerned with life cycle management and conservation activities As noted above this Bulletin is also intended to act as a background and supporting document to the next edition of
