Design Innovation and Network Architecture for the Future Internet Boucadair, Mohamed, Jacquenet, Christian, 2021-04-16

For the past couple of years, network automation techniques that include software defined networking (SDN) and dynamic resource allocation schemes have been the subject of a significant research and development effort. Likewise, network functions virtualization (NFV) and the foreseeable usage of a set of artificial intelligence techniques to facilitate the processing of customers requirements and the subsequent design, delivery, and operation of the corresponding services are very likely to dramatically distort the conception and the management of networking infrastructures. Some of these techniques are being specified within standards, developing organizations, while others remain perceived as a buzz without any concrete deployment plans disclosed by service providers. An in depth understanding and analysis of these approaches should be conducted to help internet players in making appropriate design choices that would meet their requirements as well as their customers. This is an important area of research as these new developments and approaches will inevitably reshape the internet and the future of technology.

Design Innovation and Network Architecture for the Future Internet sheds light on the foreseeable yet dramatic evolution of internet design principles and offers a comprehensive overview on the recent advances in networking techniques that are likely to shape the future internet. The chapters provide a rigorous in depth analysis of the promises, pitfalls, and other challenges raised by these initiatives while avoiding any speculation on their expected outcomes and technical benefits. This book covers essential topics such as content delivery networks, network functions virtualization, security, cloud computing, automation, and more. This book will be useful for network engineers, software designers, computer networking professionals, practitioners, researchers, academicians, and students looking for a comprehensive research book on the latest advancements in internet design principles and networking techniques.

Web 2.0 and Beyond Tom Funk, 2008-11-30

Web 2.0 has taken on buzzword status. It's now shorthand for everything that is new, cutting edge, and gaining momentum online. Web 2.0 can describe particular Web sites, cultural trends like social networking, blogging, or podcasting, or the underlying technology that makes today's coolest Web applications possible. Many Web 2.0 innovations were pioneered by behemoths like Google, Amazon, Apple, YouTube, and MySpace. But even the smallest, leanest companies can take advantage of the new trends, new and open source programming tools, and new networks. This book presents a wealth of

ideas that will enable any business to quickly and affordably deploy Web 2.0 best practices to gain customers and maximize profits. Web 2.0 is more a series of trends than a basket of things. More and more power is in the hands of individual users and their networks. Web content is distributed, sorted, combined, and displayed across the Web in formats and places not anticipated by the content creators. New technology now makes rich online experiences and complex software applications possible and at a low cost. Integration is breaking down walls between PCs and mobile devices. Web 2.0 is a landscape in which users control their online experience and influence the experiences of others. Business success on the Web therefore now comes from harnessing the power of social networks, computing networks, media and opinion networks, and advertising networks. Web 2.0 takes advantage of higher bandwidth and lighter weight programming tools to create rich, engaging online experiences that compete with television and other offline activities. With examples and case studies from real businesses, this book demonstrates what makes a successful Web 2.0 company regardless of its size or resources. A non-technical guide, it is aimed squarely at the marketer or business manager who wants to understand recent developments in the online world and to turn them into practical competitive advantages.
