Dobkin, 2003-01-16 The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical

research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases. From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery. Dr Dobkin shows how functional neuroimaging serves as a marker for whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain. Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking. From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices. The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix. The management of common medical issues impairments and disabilities are described across diseases. Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment. Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective. The First Edition of this book was titled *Neurologic Rehabilitation*. The title has been changed to reflect Dr Dobkin's sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published. The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters. Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients.
