Final Solutions Richard M. Lerner, 2008 The nature nurture debate continues to stir controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others. This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in 1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co opted to serve the political agenda of today s reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically The Geometry of Genocide Bradley Campbell, 2015-10-29 In The Geometry of Genocide superior and inferior races Bradley Campbell argues that genocide is best understood not as deviant behavior but as social control a response to perceived deviant behavior on the part of victims Using Donald Black's method of pure sociology Campbell considers genocide in relation to three features of social life diversity inequality and intimacy According to this theory genocidal conflicts begin with changes in diversity and inequality such as when two previously separated ethnic groups come into contact or when a subordinate ethnic group attempts to rise in status Further conflicts are more likely to result in genocide when they occur in a context of social distance and inequality and when aggressors and victims cannot be easily separated Campbell applies his approach to five cases the killings of American Indians in 1850s California Muslims in 2002 India and 1992 Bosnia Tutsis in 1994 Rwanda and Jews in 1940s Europe These case studies which focus in detail on particular incidents within each instance of genocide demonstrate the theory s ability to explain an array of factors including why genocide occurs and who participates Campbell's theory uniquely connects the study of genocide to the larger study of

conflict and social control By situating genocide among these broader phenomena The Geometry of Genocide provides a novel and compelling explanation of genocide while furthering our understanding of why humans have conflicts and why they respond to conflict as they do The Jewish Holocaust Marty Bloomberg, Buckley Barry Barrett, 1995-01-01 This expanded edition of the guide to major books in English on the Holocaust is organized into ten subject areas reference materials European antisemitism background materials the Holocaust years Jewish resistance Genocide Graham Charles Kinloch, Raj P. Mohan, 2005 Twenty authors analyze factors behind genocidal situations worldwide with detailed case studies and an evaluation of attempts to prevent genocide and of the implications for human rights policies with a particular concern to develop new and practical insights Provided by publisher Postmodernism and the Holocaust ,2021-10-25 This book is the first sustained inquiry into the ways in which postmodern thinkers have grappled with the historical bases implications and methodological problems of the Holocaust The book examines the thinking of Arendt Levinas Foucault Lyotard and Derrida all of whom have recognized the centrality of the Nazi genocide to the epoch in which we live The essays written for this volume constitute a wide ranging study of the efforts of postmodernism to articulate the Holocaust **History of the Holocaust** Jonathan C. Friedman, 2010-12-15 The genocide of Jewish and non Jewish civilians perpetrated by the German regime during World War Two continues to confront scholars with elusive questions even after nearly seventy years and hundreds of studies This multi contributory work is a landmark publication that sees experts renowned in their field addressing these questions in light of current research A comprehensive introduction to the history of the Holocaust this volume has 42 chapters which add important depth to the academic study of the Holocaust both geographically and topically The chapters address such diverse issues as continuities in German and European history with respect to genocide prior to 1939 the eugenic roots of Nazi anti Semitism the response of Europe's Jewish Communities to persecution and destruction the Final Solution as the German occupation instituted it across Europe rescue and rescuer motivations the problem of prosecuting war crimes gender and Holocaust experience the persecution of non Jewish victims the Holocaust in postwar cultural venues This important collection will be essential reading for all those interested in the history of the Holocaust

Reader's Guide to the History of Science Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn The Magical Lantern Murzban Jal, 2022-11-28 The book The Magical Lantern is a collection of essays on Marxist philosophy It is based on the philosophical reflection on Marx s idea of phantasmagoria as the magical lantern that creates eerie images an idea that is central to Marx s theory of modern capitalist societies It talks of the importance of Marx s philosophy and its application in concrete politics especially in creating socialist humanist philosophy

of human emancipation where global societies can be emancipated from the phantasmagorias that haunt them thus able to transcend global capitalism which is in terminal and permanent crisis It then critiques the rise of authoritarian regimes emerging all over the world and seeks to explain the rise of global totalitarianism But it claims that the answer to authoritarianism is not liberalism since liberalism is part of the late imperialism in permanent crisis as well as it involves what Slavoj i ek calls the Denkverbot the prohibition against thinking and thus involves the return of the eerie phantasmagoria that does not allow critical thinking However the critique of liberalism does not relapse into orthodox Marxism since this book argues that in the genre of orthodox Marxism the ghosts of Stalin and Mao with their own authoritarianism haunt philosophies of human emancipation While Stalin is portrayed as a brutal counter revolutionary who destroyed Marxism by evoking Marxism itself Mao is presented as the alchemist of the revolution and a peculiar form of Stalinism in rebellion against Stalinism itself The chapters in this book were originally published in Critique Journal of Socialist Theory Two Views of Virtue F. F. Centore, 2000-05-30 Centore's work is an inquiry into the weaknesses and strengths of the two basic positions in ethics the man centered model and the God centered model for deciding between right and wrong behavior The philosophical paradigm for the man centered approach is absolute relativism while the paradigm for the God centered approach is relative absolutism Centore argues that the man centered model in actual practice proves not to be realistic as an ethical guide while the God centered model if properly understood is the most useful approach This work penetrates difficult ethical issues by examining human experience and reasoning in conjunction with actual choices of action Although the God centered approach is shown to be the most practical Centore argues for a natural moral law that avoids any specific theology Each chapter discusses the historical and theoretical background of the approaches and two possible compromises The work is enlivened with examples of possible contexts in which moral decisions must take place Various ethical dilemmas are presented with an examination of the potential consequences of applying either the atheistic or the theistic ethical approach Centore's argument is complex but he explains the elements clearly and his conclusion is strengthened by real life cases and an extensive Bibliography **A Whisper Past** Leilani Muir,2014-03 The story of Leilani Muir whose abusive mother had her institutionalized at the age of 11 as mentally defective She was questioned by the Alberta Eugenics Board and was subsequently sterilized She discusses her attempts to have that operation reversed and the lawsuit she eventually launched against the Alberta government **Confusions and Clarifications** F. F. Centore, 1997 This book brings together the chief elements of 3 000 years of philosophy as found mainly in Western thought in a highly readable form The work concentrates on problems and issues much more than on names dates and places he book includes an extensive bibliography of works related to the main themes of the text followed by a long list of names and dates of leading historical figures in various fields especially in science philosophy and theology The Trouble with Twin Studies Jay Joseph, 2014-11-20 The Trouble with Twin Studies questions popular genetic explanations of human behavioral differences

based upon the existing body of twin research Psychologist Jay Joseph outlines the fallacies of twin studies in the context of the ongoing decades long failure to discover genes for human behavioral differences including IO personality and the major psychiatric disorders This volume critically examines twin research with a special emphasis on reared apart twin studies and incorporates new and updated perspectives analyses arguments and evidence Nature and Nurture Cynthia Garcia Coll, Elaine L. Bearer, Richard M. Lerner, 2014-04-04 What does it mean to find a gene or set of genes that are associated with ADHD schizophrenia or autism Could we eradicate such diseases from our species through gene therapy Is it possible to eradicate from our genome the genetic material that predisposes us to be too aggressive too shy less intelligent or not active enough Who has the political power and or moral authority to make these decisions The premise of Nature and Nurture is that the complexity of the transactions between nature and nurture between genes and the environment from the cellular to the cultural level make these questions incredibly complex and in need of careful attention by educators scientists the public and policymakers A product of the conference held at Brown University in 2001 this book suggests that genes and environments work together interactively in a complex and closely intertwined fashion The contributors to this book biologists psychologists psychiatrists and economists present knowledge that enables research and application to transcend the traditional question of whatever variance or significance is attributed to genetics versus environment in the development of a particular behavioral trait This book presents a variety of views on the current status of knowledge about the ways in which dynamic developmental mutually interactive systems in the genetic and environmental domains operate The chapters represent contributions from different perspectives **Histories of the Holocaust** Dan Stone, 2010-06-17 The Holocaust is one of the most intensively studied phenomena in modern history. The volume of writing that fuels the numerous debates about it is overwhelming in quantity and diversity Even those who have dedicated their professional lives to understanding the Holocaust cannot assimilate it all There is then an urgent need to synthesize and evaluate the complex historiography on the Holocaust exploring the major themes and debates relating to it and drawing widely on the findings of a great deal of research Concentrating on the work of the last two decades Histories of the Holocaust examines the Final Solution as a European project the decision making process perpetrator research plunder and collaboration regional studies ghettos camps race science antisemitic ideology and recent debates concerning modernity organization theory colonialism genocide studies and cultural history Research on victims is discussed but Stone focuses more closely on perpetrators reflecting trends within the historiography as well as his own view that in order to understand Nazi genocide the emphasis must be on the culture of the perpetrators The book is not a history of the history of the Holocaust offering simply a description of developments in historiography Stone critically analyses the literature discerning major themes and trends and assessing the achievements and shortcomings of the various approaches He demonstrates that there never can or should be a single history of the Holocaust and facilitates an understanding of the genocide of the Jews from a multiplicity of angles An

understanding of how the Holocaust could have happened can only be achieved by recourse to histories of the Holocaust detailed day by day accounts of high level decision making long term narratives of the Holocaust's relationship to European histories of colonialism and warfare micro historical studies of Jewish life before during and after Nazi occupation and cultural analyses of Nazi fantasies and fears Political Psychology David Patrick Houghton, 2014-08-25 What shapes political behavior more the situations in which individuals find themselves or the internal psychological makeup beliefs values and so on of those individuals This is perhaps the leading division within the psychological study of politics today Political Psychology Situations Individuals and Cases 2nd edition provides a concise readable and conceptually organized introduction to the topic of political psychology by examining this very question Using this situationism dispositionism framework which roughly parallels the concerns of social and cognitive psychology this book focuses on such key explanatory mechanisms as behaviorism obedience personality groupthink cognition affect emotion and neuroscience to explore topics ranging from voting behavior and racism to terrorism and international relations. The new edition includes a new chapter on the psychology of the media and communication Houghton has also updated the text to analyze recent political events such as the 2012 election and to include up and coming research in the areas of neuroscience behavioral economics and more Houghton's clear and engaging examples directly challenge students to place themselves in both real and hypothetical situations which involve intense moral and political dilemmas This highly readable text will provide students with the conceptual foundation they need to make sense of the rapidly changing and increasingly important field of political Population Politics in Twentieth Century Europe Maria-Sophia Quine, 2013-04-15 Maria Sophia Quine psychology demystifies the population policies of fascist regimes by looking at them in the wider context of how societies in general reacted to the profound economic changes brought by industrialization Population Politics in Twentieth Century Europe provides an original comparative treatment of European population policies gives the historical background to twentieth century population policies considers topics such as racism and sexism in Nazi ideology Eugenics in England family allowance schemes in France and sterilization synthesizes the latest research in different fields and countries The New **Know-nothings** Morton Hunt, 2017-09-29 In recent years political religious and other special interest groups have waged war on behavioral and social research projects that threaten their interests and values They have hounded researchers out of universities cut off their funding through congressional and state legislative pressure and harassed them with public demonstrations and picketing all in the hope of forcing them to abandon their research Formerly such unwanted involvement came from activists on the left Now it comes from all across the political spectrum as anti science attitudes and techniques have diffused throughout society In addition conservative and religious forces lobby Congress and state legislatures against funding for major research projects of which they disapprove This phenomenon represents a grave threat to both scientific freedom and the well being of modern society Morton Hunt gives us the first serious overview of this threat to behavioral and

social science research He illustrates precisely how scientific research has been subjected to political attack The New Know Nothings illustrates this phenomenon using in depth case histories and background discussions of the conflicting social forces involved It considers the prevalence of each form of opposition of research has been subjected to political attack The New Know Nothings illustrates this phenomenon using in depth case histories and background discussions of the conflicting social forces involved It considers the prevalence of each form of opposition to research using interviews with expert observers in the sciences and government Hunt reviews the nature nurture debate biological contributions to gender differences conservative opposition to sex research in the schools the debate over the controlled drinking approach to alcoholism animal rights versus scientists rights to use animals in research the controversy over day care anthropological research needs versus the Native American repatriation of re **Bloodscripts** Elana Gomel, 2003 We live in an increasingly violent world From suicide terrorists to serial killers violent subjects challenge our imaginations We seek answers to our questions on this subject in literature cinema and electronic media In Bloodscripts Elana Gomel examines how popular culture narratives construct violent subjectivity Using such various narratives as mystery horror detective and fantasy fiction as well as accounts of the atrocities perpetuated by serial killers and the Holocaust Bloodscripts offers a new map of the genres of violence and links the twin obsessions of postmodern culture crime and genocide Bloodscripts is a stimulating original and accessible account of the narrative construction of the violent subject It proposes a narrative model that will be of interest to literary critics cultural scholars criminologists and anyone trying to understand the role of violence in The Holocaust and the Nonrepresentable David Patterson, 2018-05-22 Many books focus on postmodern culture issues of Holocaust representation but few address why the Holocaust in particular poses such a representational problem David Patterson draws from Emmanuel Levinas s contention that the Good cannot be represented He argues that the assault on the Good is equally nonrepresentable and this nonrepresentable aspect of the Holocaust is its distinguishing feature Utilizing Jewish religious thought Patterson examines how the literary word expresses the ineffable and how the photographic image manifests the invisible Where the Holocaust is concerned representation is a matter not of imagination but of ethical implication not of what it was like but of what must be done Ultimately Patterson provides a deeper understanding of why the Holocaust itself is indefinable not only as an evil but also as a fundamental assault on the very categories of good and evil affirmed over centuries of Jewish teaching and testimony The Myth of Race Robert Wald Sussman, 2014-10-06 Although eugenics is now widely discredited some groups and individuals claim a new scientific basis for old racist assumptions Pondering the continuing influence of racist research and thought despite all evidence to the contrary Robert Sussman explains why when it comes to race too many people still mistake bigotry for science
