Revisited in Acoustic Space Ronny Diehl,2011-05 Master s Thesis from the year 2010 in the subject American Studies Culture and Applied Geography grade 100% Humboldt University of Berlin English Department language English abstract This is a book about Burning Man its history as a re enactment of the American Frontier and its cultural significance and symbolism for the post modern post western post rational society As a European Burning Man has always struck me as an event of the Wild West where almost everything was possible and acceptable and where a community reinvented civilization anew Like the typical Western stories and movies Burning Man is a story of humble beginnings in the isolation of the desert The growth from a primitive to complex society seen in the numerous institutions and services we see today in Black Rock City was also accompanied by a surge in rules to safeguard the health and well being of its citizens Therefore Burning Man serves as an echo land of the American Frontier myth At the same time Burning Man is the event of the 21st century that foretells the undergoing changes of Western society and mankind After 3000 years of left brain hemisphere dominance induced by the phonetic alphabet and later typography the age of electric and electronic media finally brought us back to

right hemisphere modes of perception and cognition Participation and a new emphasis on ritual are just two examples of this new awareness wherein the space time dimensions have changed dramatically from linear to acoustic With this essay I want to give something back to the Burning Man community and hope that maybe some feel inspired to think of Burning Man in a new historical and global context Anyone interested in American history and the countercultural precedence of Burning Man as well as Burning Man as the Marshall McLuhan s Global Theater will definitely find some interesting insights This is the master thesis as part of my American Studies Program at Humboldt University in B Through the Lens of Anthropology Robert J. Concept of the Common Heritage of Mankind in International Law Kemal Baslar,2024-02-06 The concept of the common heritage of mankind is one of the most extraordinary developments in recent intellectual history and one of the most revolutionary and radical legal concepts to have emerged in recent decades The year 1997 marks the thirtieth anniversary of the advent of the concept in the domain of public international law Ever since its emergence it has become evident that no other concept notion principle or doctrine has brought as much intensive debate controversy confrontation and speculation as the common heritage phenomenon did This is because it is a philosophical idea that questions the regimes of globally important resources regardless of their situation and requires major changes in the world to apply its provisions In other words the application and enforcement of the common heritage of mankind require a critical reexamination of many well-established principles and doctrines of classical international law such as acquisition of territory consent-based sources of international law sovereignty equality resource allocation and international personality This book aims to explore the legal theory and implications of the concept of the common heritage of mankind It addresses almost all aspects of the concept in the light of the experience of three decades The author takes into account the elements of the common heritage concept in the fields of jurisprudence outer space law the law of the sea the law of Antarctica international environmental law human rights and general principles of public international law It tries to develop a normative framework through which the concept may offer alternatives for the governance of the global commons Space, the Final Frontier Heather Couper,1980 **The**
