

Financial Distress

The world is recovering from a period of tremendous turmoil and instability in the capital markets. It is more important now than ever that governance system, regulations and accounting standards promote right decisions, policies and transparent financial statements that support sustainability and safe economic development. Most accounting and not accurate financial reporting led companies to wrong governance decisions that provided an enormous catastrophe which hit hardest for the global economy. One of the major problems in modern business world is that most stakeholders are divorced from the running of the business so they may not have the appropriate level of knowledge to assess their management's stewardship of their assets. This agent-principal problem can be solved by proper accounting and reporting practices and further improvement of governance standards. The main aim of the book is a search for an effective relationship between management, financial reporting and stability of the economic system in crisis and post-crisis conditions by creating meaningful proposals by representatives of different research schools, regulatory bodies and practitioners.

Corporate Governance, Financial Markets and Global Convergence Morten Balling, Elizabeth Hennessy, Richard O'Brien, 2013-11-11

For many years, businesses have been heavily dependent on bank financing, and this situation has not changed fundamentally. In his paper on stock exchange governance in the European Union, Guido Ferrarini discusses the relative merits of member and investor ownership and compares stock exchange regulation in a number of EU countries. Faced with increasing competition amongst themselves and against other enterprises that offer transaction services such as proprietary trading systems, it is essential for European stock exchanges to improve their efficiency and to generate volume. Large investments in new information technology are necessary in order to preserve competitiveness in a global financial market. The implementation of the ISD has accelerated cross-border transaction activity of member firms and investors and strengthened the pressure for convergence of national stock exchange laws in the EU. In their paper, Francesco Giavazzi and Marco Battaglini look at the role played by banks in privatization processes. Banks can be involved in such processes in several ways. They may themselves be the objects of privatization, since in many countries a significant fraction of the banking industry is publicly owned. This is the case in France, Spain, and Italy. But banks can also be important buyers of the equity of industrial firms sold by the government if they are allowed to do so. The authors characterize privatizations as a very good opportunity to set up the right environment for the development of new financial intermediaries and, in general, for a sound corporate governance system.
