Englehardt,Michael S. Pritchard,Kerry D. Romesburg,Brian Schrag,2009-09-18 This book is an invitation to academic administrators at every level to engage in

reflection on the ethical dimensions of their working lives Academics are very good at reflecting on the ethical issues in other professions but not so interested in reflecting on those in their own including those faced by faculty and administrators Yet it is a topic of great importance Academic institutions are value driven hence virtually every decision made by an academic administrator has an ethical component with implications for students faculty the institution and the broader community Despite this they receive little systematic preparation for this aspect of their professional lives when they take up administrative posts especially when compared to say medical or legal training Surprisingly little has been written about the ethical challenges that academic administrators are likely to face Most of the literature relating to academic administration focuses on leadership and draws heavily on management and social science theory The importance of focusing on ethical deliberation and decision making often goes unrecognized

Smith, 2022-01-13 What is the relationship between artificial intelligence robots and theology The connections are much closer than one might think There is a deep spiritual longing in the world of AI and robotics Technology is a prayer it reveals the depth of our eschatology Through the study of AI and robotic literature one can see a clear desire to both transcend human limitations and overcome the fallenness of human nature The questions of ethics power and responsibility are not new to Christian anthropology This book will introduce and examine some of the major ethical issues surrounding current AI and robotic technology from a theological and philosophical lens In the study of AI and robot ethics the Christian community has a chance to join the global efforts to build technology for good Will we join them      Robot Ethics Patrick Lin, Keith Abney, George A. Bekey, 2014-01-10 Prominent experts from science and the humanities explore issues in robot ethics that range from sex to war Robots today serve in many roles from entertainer to educator to executioner As robotics technology advances ethical concerns become more pressing Should robots be programmed to follow a code of ethics if this is even possible Are there risks in forming emotional bonds with robots How might society and ethics change with robotics This volume is the first book to bring together prominent scholars and experts from both science and the humanities to explore these and other questions in this emerging field Starting with an overview of the issues and relevant ethical theories the topics flow naturally from the possibility of programming robot ethics to the ethical use of military robots in war to legal and policy questions including

liability and privacy concerns The contributors then turn to human robot emotional relationships examining the ethical implications of robots as sexual partners caregivers and servants Finally they explore the possibility that robots whether biological computational hybrids or pure machines should be given rights or moral consideration Ethics is often slow to catch up with technological developments This authoritative and accessible volume fills a gap in both scholarly literature and policy discussion offering an impressive collection of expert analyses of the most crucial topics in this increasingly important field
