Handbook of Information and Communication Security Peter Stavroulakis, Mark Stamp, 2010-02-23 At its core information security deals with the secure and accurate transfer of information While information security has long been important it was perhaps brought more clearly into mainstream focus with the so called Y2K issue The Y2K scare was the fear that computer networks and the systems that are controlled or operated by software would fail with the turn of the millennium since their clocks could lose synchronization by not recognizing a number instruction with three zeros A positive outcome of this scare was the creation of several Computer Emergency Response Teams CERTs around the world that now work cooperatively to exchange expertise and information and to coordinate in case major problems should arise in the modern IT environment The terrorist attacks of 11 September 2001 raised security concerns to a new level The international community responded on at least two fronts one front being the transfer of reliable information via secure networks and the other being the collection of information about potential terrorists As a sign of this new emphasis on security since 2001 all major academic publishers have started technical journals focused on security and every major communications conference for example Globecom and ICC has organized workshops and sessions on security issues In addition the IEEE has created a technical committee on Communication and Information Security The first editor was intimately involved with security for the Athens Olympic Games of 2004

Eighth IEEE International Symposium on Computers and Communication, 2003 ISCC 2003 focuses on all aspects of computers communications and service provisioning over the enhanced global telecommunications networks The proceedings covers comprehensive topics in research and applications areas such as network reliability and quality of service wireless cellular and mobile communications mobile ad hoc networks distributed systems control and optimization of communication systems and security privacy and information access

Supercomputer Simulations in Chemistry Michel Dupuis, 2012-12-06 Awareness of the need and potential of supercomputers for scientific and engineering research has grown tremendously in the past few years It has culminated in the Super computer Initiative undertaken two years ago by the National Science Foundation and presently under full development in the United States Similar initiatives are under way in several European countries and in Japan too Thus the organization of a symposium on Supercomputer Simulations in Chemistry appeared timely and such a meeting was held in Montreal Canada in August 1985 sponsored by IBM Kingston and IBM Canada and organized by Dr Enrico Clementi and Dr Michel Dupuis In connection with this IBM's support of the Cornell University Supercomputer Center several projects in the IBM Research Division the experimental parallel engine ICAP assembled at IBM Kingston and the announcement Fall 1985 of an add on vector feature to the 3090 IBM mainframe underscore IBM's commitment to high end scientific engineering computing The papers presented in this volume discuss topics in quantum mechanical and statistical mechanical simulations both of which test the limits of computer hardware and software Already a great deal of effort has been put into using vector supercomputers in

these two areas Much more is needed and without doubt is bound to happen To start an historical perspective of computational quantum chemistry is provided by Professor Lindwin The contribution by Ohno and co workers gives an indication of the present status of Japanese supercomputers Kutzelnigg et al Bauschlicher et al and Guest et al
