

Chapter 10 Circular Motion

Exercises

10.1 Rotation and Revolution (page 171)

Match each term to its definition.

- | Term | Definition |
|----------------------------|--|
| <u> b </u> 1. rotation | a. straight line around which rotation takes place |
| <u> a </u> 2. axis | b. motion about an axis located within the body of the object |
| <u> c </u> 3. revolution | c. motion about an axis located outside the body of the object |
4. Circle the letter that best describes Earth's motion around the sun.
 a. spin
 b. rotation
☒ c. revolution
 d. linear
5. When you ride a bicycle, the bicycle wheels rotate around their axes.
6. Circle each letter that is an example of rotation.
☒ a. a Ferris wheel in motion
 b. Earth moving around the sun
☒ c. an ice skater doing a pirouette
 d. riders on a Ferris wheel in motion

10.2 Rotational Speed (pages 171–174)

Match each term to its definition.

- | Term | Definition |
|----------------------------------|--|
| <u> c </u> 7. linear speed | a. speed of something moving along a circular path |
| <u> b </u> 8. rotational speed | b. number of rotations per unit of time |
| <u> a </u> 9. tangential speed | c. distance traveled per unit of time |
10. Circle the letter that describes the direction of motion associated with tangential speed.
 a. toward the center of rotation ☒ b. tangent to the circular path
 c. outward from the center d. downward toward Earth
11. Is the following sentence true or false? The terms *linear speed* and *rotational speed* can be used interchangeably. false
12. Is the following sentence true or false? All parts of a spinning merry-go-round have the same angular speed. true

Conceptual Physics Study Guide Answers 3:

From Atoms to Galaxies Sadri Hassani, 2011-06-13 College students in the United States are becoming increasingly incapable of differentiating between proven facts delivered by scientific inquiry and the speculations of pseudoscience. In an effort to help stem this disturbing trend *From Atoms to Galaxies: A Conceptual Physics Approach to Scientific Awareness* teaches heightened scientific acuity as it educates students about the physical world and gives them answers to questions large and small. Written by Sadri Hassani, the author of several mathematical physics textbooks, this work covers the essentials of modern physics in a way that is as thorough as it is compelling and accessible. Some of you might want to know: How did Galileo come to think about the first law of motion? Did Newton actually discover gravity by way of an apple and an accident? Or maybe you have mulled over: Is it possible for Santa Claus to deliver all his toys? Is it possible to prove that Elvis does not visit Graceland every midnight? Or perhaps you've even wondered: If ancient Taoism really parallels modern physics? If psychoanalysis can actually be called a science? How it is that some philosophies of science may imply that a 650-year-old woman can give birth to a child? No Advanced Mathematics Required. A primary textbook for undergraduate students not majoring in physics, *From Atoms to Galaxies* examines physical laws and their consequences from a conceptual perspective that requires no advanced mathematics. It explains quantum physics, relativity, nuclear and particle physics, gauge theory, quantum field theory, quarks and leptons, and cosmology. Encouraging students to subscribe to proven causation rather than dramatic speculation, the book defines the often obscured difference between science and technology, discussing how this confusion taints both common culture and academic rigor. Explores the various philosophies of science, demonstrating how errors in our understanding of scientific principles can adversely impact scientific awareness. Exposes how pseudoscience and New Age mysticism advance unproven conjectures as dangerous alternatives to proven science. Based on courses taught by the author for over 15 years, this textbook has been developed to raise the scientific awareness of the untrained reader who lacks a technical or mathematical background. To accomplish this, the book lays the foundation of the laws that govern our universe in a nontechnical way, emphasizing topics that excite the mind, namely those taken from modern physics and exposing the abuses made of them by the New Age gurus and other mystagogues. It outlines the methods developed by physicists for the scientific investigation of nature and contrasts them with those developed by the outsiders who claim to be the owners of scientific methodology. Each chapter includes essays which use the material developed in that chapter to debunk misconceptions, clarify the nature of science, and explore the history of physics as it relates to the development of ideas. Noting the damage incurred by confusing science and technology, the book strives to help the reader to emphatically demarcate the two while clearly demonstrating that science is the only element capable of advancing technology. **MCAT Physics and Math Review, 3rd Edition** The Princeton Review, 2016-01-05 Make sure you're studying with the most up-to-date prep materials.  Robert Cassidy,Elizabeth S. Charles,James D. Slotta,Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of
 a growing international network of researchers and practitioners to promote the development and uptake of evidence based
 pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that
 attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to
 change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co
 design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of
 publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners
 in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community
 These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more
 productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically
 examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions
 Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and
 practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent
 both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a
 third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of
 abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing
 these types of studies together in an open access format that we may contribute to the development of new forms of
 practitioner researcher interactions that promote co design in pedagogical innovation **Instructor's Manual to**
