

Chapter 8 Momentum

Exercises

8.1 Momentum (page 125)

1. Define momentum. the mass of an object multiplied by its velocity
2. What is the equation for momentum? momentum = mass \times velocity = mv
3. A moving object can have a large momentum if it has a(n) large mass, a(n) high speed, or both.

8.2 Impulse Changes Momentum (pages 125–129)

4. Is the following sentence true or false? If the momentum of an object changes, either the mass or the velocity or both change.
true
5. If a force is increased on an object, what happens to the velocity and the momentum?
There is a greater change in velocity and momentum.
6. The change in momentum depends on the force that acts and the length of time it acts.
7. What is the short-hand notation for impulse? impulse = $F\Delta t$
8. What is the formula that relates impulse and change in momentum?
 $F\Delta t = \Delta(mv)$
9. Explain why a baseball player follows through with his or her swing.
The baseball player wants to apply the greatest force possible for as long as possible so that the ball goes as far as possible.
10. Is the following sentence true or false? By hitting a soft object, such as a haystack, instead of a hard object, such as a concrete wall, you extend the contact time in which the momentum is brought to zero.
true
11. Circle the letter of each sentence that is true about impulse and momentum.
 - a. When jumping from an elevated position down to the ground, you should keep your legs stiff to decrease the momentum.
 - ☒ b. A wrestler thrown to the floor should extend his time hitting the mat by relaxing his muscles and spreading the impulse to his foot, knee, hip, ribs, and shoulder.
 - ☒ c. When a boxer gets punched, she should move her head away from the punch to increase the contact time and reduce the force.
 - ☒ d. A dropped dish is more likely to survive a fall on carpet rather than concrete, because the softness of the carpet leads to increased contact time.

Conceptual Revolutions Paul Thagard, 2018-06-05 In this path breaking work Paul Thagard draws on the history and philosophy of science cognitive psychology and the field of artificial intelligence to develop a theory of conceptual change capable of accounting for all major scientific revolutions The history of science contains dramatic episodes of revolutionary change in which whole systems of concepts have been replaced by new systems Thagard provides a new and comprehensive perspective on the transformation of scientific conceptual systems Thagard examines the Copernican and the Darwinian revolutions and the emergence of Newton's mechanics Lavoisier's oxygen theory Einstein's theory of relativity quantum theory and the geological theory of plate tectonics He discusses the psychological mechanisms by which new concepts and links between them are formed and advances a computational theory of explanatory coherence to show how new theories can be judged to be superior to previous ones

The Concept of the Positron Norwood Russell Hanson, 2010-08-26 Originally published in 1963 *The Concept of the Positron* forms a detailed analysis of quantum theory Whilst it is not as well known as Professor Hanson's previous book *Patterns of Discovery* 1958 the text has many interesting aspects In many ways it goes further than Hanson's earlier work in approaching the problems of theory competition and the rationality of science topics that have since become central to the philosophy of science It is also notable for a rigorous and forthright defence of the Copenhagen Interpretation Taken together the ideas presented in this book constitute a first rate achievement in the history and philosophy of science This paperback reissue comes with a new preface from Matthew Lund Assistant Professor Faculty of Philosophy and Religious Studies at Rowan University

Molecular Theory of Solvation F. Hirata, 2006-04-11 Molecular Theory of Solvation presents the recent progress in the statistical mechanics of molecular liquids applied to the most intriguing problems in chemistry today including chemical reactions conformational stability of biomolecules ion hydration and electrode solution interface The continuum model of solvation has played a dominant role in describing chemical processes in solution during the last century This book discards and replaces it completely with molecular theory taking proper account of chemical specificity of solvent The main machinery employed here is the reference interaction site model RISM theory which is combined with other tools in theoretical chemistry and physics the ab initio and density functional theories in quantum chemistry the generalized Langevin theory and the molecular simulation techniques This book will be of benefit to graduate students and industrial scientists who are struggling to find a better way of accounting and or predicting solvation properties

Studies in Inductive Probability and Rational Expectation Theo A.F. Kuipers, 2012-12-06 3 in philosophy and therefore in metaphilosophy cannot be based on rules that avoid spending time on pseudo problems Of course this

implies that if one succeeds in demonstrating convincingly the pseudo character of a problem by giving its solution the time spent on it need not be seen as wasted We conclude this section with a brief statement of the criteria for concept explication as they have been formulated in several places by Carnap Hempel and Stegmüller Hempel's account 13J Chapter 1 is still very adequate for a detailed introduction The process of explication starts with the identification of one or more vague and perhaps ambiguous concepts the so called explicanda Next one tries to disentangle the ambiguities This however need not be possible at once Ultimately the explicanda are to be replaced not necessarily one by one by certain counterparts the so called explicata which have to conform to four requirements They have to be as precise as possible and as simple as possible In addition they have to be useful in the sense that they give rise to the formulation of theories and the solution of problems The three requirements of preciseness simplicity and usefulness have of course to be pursued in all concept formation

Conservative Reductionism Michael Esfeld, Christian Sachse, 2011-05-09 Conservative Reductionism sets out a new theory of the relationship between physics and the special sciences within the framework of functionalism It argues that it is wrong headed to conceive an opposition between functional and physical properties or functional and physical descriptions respectively and to build an anti reductionist argument on multiple realization By contrast a all properties that there are in the world including the physical ones are functional properties in the sense of being causal properties and b all true descriptions laws theories that the special sciences propose can in principle be reduced to

physical descriptions laws theories by means of functional reduction despite multiple realization The book develops arguments for a from the metaphysics of properties and the philosophy of physics These arguments lead to a conservative ontological reductionism It then develops functional reduction into a fully fledged conservative theory reduction by means of introducing functional sub types that are coextensive with physical types illustrating that conservative reductionism by means of case studies from biology notably the relationship between classical and molecular genetics
