

Q1. Can the rectangular component of the vector be greater than the vector itself? Explain.

Ans: No, the rectangular component of a vector can't be greater than the vector itself.

Because, The rectangular components of a vector are given by the equation

$$F = \sqrt{F_x^2 + F_y^2}$$

( Where  $F_x$  and  $F_y$  are rectangular components of vector  $F$  )

Therefore, The rectangular component of a vector can be less than or equal but can't be greater than the Vector itself.

Q2. Explain why door handles are not put near hinges?

Ans: Door handles are not put near hinges. Because, by definition of torque

Torque = Force  $\times$  Perpendicular distance from axis of rotation =  $F \times d$ .

From this relation it is clear that torque depends on both force and distance.

Therefore if we put handles near hinges then the distance will be zero and hence no torque will be Produced.

Q3. Can a small force ever exert a greater torque than a larger force? Explain.

Ans: Yes it is possible. Because, torque is the product of force and moment arm.

I.e. Torque = Force  $\times$  Moment arm

From the above relation it is clear that we can exert greater torque even by a small force by taken large moment arm.

Q4. Why it is better to use a long spanner rather than a short one to loosen a rusty nut?

Ans: It is better to use a long spanner to loosen a rusty nut, rather than a short spanner.

Because, in this case the length of spanner is acts as moment arm, and we know that

$$T = F \times d \quad (\text{where } d \text{ is the moment arm})$$

From the above result it is clear that, torque increases if moment arm increases and vice versa.

Q5. The gravitational force acting on a satellite is always directed towards the Centre of the earth.

Does this force exert torque on satellite?

Ans: The gravitational force acting on a satellite does not exert any torque.

**Raising the Alarm** Robert Andrew Este, 2013-06-13 As the foundation of our modern world innovation has generated a seemingly endless ocean of new products new processes new thoughts and new ways of doing things Every day we enhance our innovation and its effects and we advance accomplish and constantly seek even more Generally we tend to live well based on our innovation outputs This suggests that we think we know what we are doing and that we know where we are headed We do know what we are doing don't we Most would say yes we do indeed we are inclined to be certain of it But can we be certain about what we know about innovation To address this question we search for evidence of any useful outputs of the work of philosophy Such outputs should help us better understand if we can indeed be certain about what we do and where we are going Is there any evidence of this Alas philosophy is nowhere to be found As a tool of rigorous reflection and understanding even where some of the most exciting and forward looking innovation enterprise in science engineering and

organizational structuring takes place philosophy seems to have vanished if it was ever there in the first place Today this seems somehow normal and quite all right But is it Of course we are aware that our history of philosophy illuminates the earlier pathways we once followed to achieve our modernity and that is fine but where is philosophy and its work today Where has philosophy gone In this book we explore these questions and more why is philosophy vanishing or even entirely absent from our world today What has happened If at one time philosophy was so very important why would it no longer be much in evidence if it is there at all Where is the work of philosophy today as we push forward with innovation in our astonishing leading edge realms Do we really understand what we are doing Do we have any idea where we are going And most chillingly regardless of the answers does it matter The claim is made in this book that the disappearance of philosophy does matter and alarm bells ought to be ringing Why Because the work of philosophy work we seem to have forgotten is essential for us to know where we are going If we are truly serious about surviving and thriving especially by being so innovative in so many spectacular and challenging ways we cannot afford to have philosophy and its works disappear and then be forgotten Said plainly we cannot deny and then lose the maps and compass of philosophy applied to the challenges of today and tomorrow If we do we lose any reason for any journey anywhere And more broadly we are in danger of losing reason generally To continue denying philosophy and then in the end to deny that very denial is a move with no hope of benefit But the lack of evidence for the work of philosophy indicates that move is underway We are destroying any useful link between innovation and philosophy In so doing we are seriously reducing the value of innovation no matter how wonderful we think it might be while blindly forgetting the critical importance of philosophy and its work This move will guarantee that the path to our future will be fraught with unnecessary hardship and difficulty and then if it is permanent will deal a fatal blow If we truly wish to thrive and persevere we are compelled to avoid the fatal error of philosophical denial To do so we must rediscover revitalize and apply anew the rigorous work of philosophy to innovation in our modern era *JingShin Theoretical Physics Symposium in Honor of Professor Ta-You Wu* Jong-Ping Hsu, Leonardo Hsu, 1998 Prof T Y Wu is not only an eminent physicist with an encyclopedic knowledge but also a motivational teacher and an influential policy maker in science and technology The young Wu was inspired by Prof Y T Yao whose course on modern physics sparked an interest that burned during a long and productive career Among Wu s achievements are 14 books and more than 120 papers covering subjects from atomic and molecular physics to plasmas and gases to atmospheric physics to relativity theory Even at the age of 90 he remains active publishing papers and lecturing on physics Prof Wu feels grateful that he had the opportunity to educate a group of extremely talented students and in particular to discover T D Lee s remarkable talent Although creative talent is no doubt a product of nature it must also be nurtured Prof Wu has played a crucial role for an entire generation of physicists in China and has won great respect from former students such as C N Yang T D Lee K Huang and countless others Prof Wu s love of physics and his dedication in teaching and research will always be remembered **College Physics**

Structure of Space and the Submicroscopic Deterministic Concept of Physics Volodymyr Krasnoholovets, 2017-07-06 This book Structure of Space and the Submicroscopic Deterministic Concept of Physics completely formalizes fundamental physics by showing that all space which consists of objects and distances arises from the same origin manifold of sets A continuously organized mathematical lattice of topological balls represents the primary substrate named the tessellattice All fundamental particles arise as local fractal deformations of the tessellattice The motion of such particulate balls through the tessellattice causes it to deform neighboring cells which generates a cloud of a new kind of spatial excitations named inertons Thus so called hidden variables introduced in the past by de Broglie Bohm and Vigier have acquired a sense of real quasiparticles of space This theory of space unambiguously answers such challenging issues as what is mass what is charge what is a photon what is the wave  $\psi$  function what is a neutrino what are the nuclear forces and so on The submicroscopic concept uncovers new peculiar properties of quantum systems especially the dynamics of particles within a section equal to the particle s de Broglie wavelength which are fundamentally impossible for quantum mechanics This concept thoroughly discussed in the book allows one to study complex problems in quantum optics and quantum electrodynamics in detail to disclose an inner world of particle physics by exposing the structure of quarks and nucleons in real space and to derive gravity as the transfer of local deformations of space by inertons which in turn completely solves the problems of dark matter and dark energy Inertons have revealed themselves in a number of experiments carried out in condensed media plasma nuclear physics and astrophysics which are described in this book together with prospects for future studies in both fundamental and applied physics

**IIT Foundations - Mathematics Class 10** Pearson, IIT Foundation series is specifically for students preparing for IIT right from school days The series include books from class 8 to class 10th in physics chemistry mathematics Islam's Quantum Question Nidhal Guessoum, 2010-10-30 In secular Europe the veracity of modern science is almost always taken for granted Whether they think of the evolutionary proofs of Darwin or of spectacular investigation into the boundaries of physics conducted by CERN's Large Hadron Collider most people assume that scientific enquiry goes to the heart of fundamental truths about the universe Yet elsewhere science is under siege In the USA Christian fundamentalists contest whether evolution should be taught in schools at all And in Muslim countries like Tunisia Egypt Pakistan and Malaysia a mere 15 per cent of those recently surveyed believed Darwin's theory to be true or probably true This thoughtful and passionately argued book contends absolutely to the contrary not only that evolutionary theory does not contradict core Muslim beliefs but that many scholars from Islam's golden age to the present adopted a worldview that accepted evolution as a given Guessoum suggests that the Islamic world just like the Christian needs to take scientific questions quantum questions with the utmost seriousness if it is to recover its true heritage and integrity In its application of a specifically Muslim perspective to important topics like cosmology divine action and evolution the book makes a vital contribution to debate in the disputed field of science and religion
