Advances in Intelligent Analysis of Medical Data and Decision Support Systems Roumen Kountchev,Barna Iantovics,2013-02-11 This volume is a result of the fruitful and vivid discussions during the MedDecSup 2012 International Workshop bringing together a relevant body of knowledge and new developments in the increasingly important field of medical informatics This carefully edited book presents new ideas aimed at the development of intelligent processing of various kinds of medical information and the perfection of the contemporary computer systems for medical decision support The book presents advances of the medical information systems for intelligent archiving processing analysis and search by content which will improve the quality of the medical services for every patient and of the global healthcare system The book combines in a synergistic way theoretical developments with the practicability of the approaches developed and presents the last developments and achievements in medical informatics to a broad range of readers engineers mathematicians physicians and PhD students Medical Artificial Intelligence Kazem S. Zadeh,1992 **Computational Intelligence in Healthcare** Giovanna Castellano,Gabriella Casalino,2021 The number of patient health data has been estimated to have reached 2314 exabytes by 2020 Traditional data analysis techniques are unsuitable to extract useful information from such a vast quantity

of data. Thus intelligent data analysis methods combining human expertise and computational models for accurate and in depth data analysis are necessary. The technological revolution and medical advances made by combining vast quantities of available data, cloud computing services and AI based solutions can provide expert insight and analysis on a mass scale and at a relatively low cost. Computational intelligence (CI) methods such as fuzzy models, artificial neural networks, evolutionary algorithms and probabilistic methods have recently emerged as promising tools for the development and application of intelligent systems in healthcare practice. CI based systems can learn from data and evolve according to changes in the environments by taking into account the uncertainty characterizing health data including omics data, clinical data, sensor and imaging data. The use of CI in healthcare can improve the processing of such data to develop intelligent solutions for prevention, diagnosis, treatment and follow up as well as for the analysis of administrative processes. The present Special Issue on computational intelligence for healthcare is intended to show the potential and the practical impacts of CI techniques in challenging healthcare applications.
