Matters of Significance Marinus van IJzendoorn,Marian Bakersmans-Kranenburg,2024-02-15 Application of scientific findings to effective practice and informed policymaking is an aspiration for much research in the biomedical behavioural and developmental sciences But too often translations of science to practice are conceptually narrow ethically underspecified and developed quickly as salves to an urgent problem For developmental science widely implemented parenting interventions are

prime examples of technical translations from knowledge about the causes of children's mental distress. Aiming to support family relationships and facilitate adaptive child development, these programmes are rushed through when the scientific findings on which they are based remain contested and without ethical grounding of their aims. In *Matters of Significance*, Marinus van IJzendoorn and Marian Bakermans-Kranenburg draw on 40 years of experience with theoretical, empirical, meta-analytic and translational work in child development research to highlight the complex relations between replication, translation and academic freedom. They argue that challenging 'fake facts' promulgated by under-replicated and under-powered studies is a critical type of translation beyond technical applications. Such challenges can, in the highlighted field of attachment and emotion regulation research, bust popular myths about the decisive role of genes, hormones or the brain on parenting and child development with a balancing impact for practice and policymaking. The authors argue that academic freedom from interference by pressure groups, stakeholders, funders or university administrators in the core stages of research is a necessary but besieged condition for adversarial research and myth-busting. Praise for *Matters of Significance*: This thoughtful volume is an accessible overview of the authors' field-shaping collaborative research on attachment and an indispensable primer on differentiating between sense and nonsense in the service of producing cumulative developmental science and ethically translating its core insights. Glenn I. Roisman, University of Minnesota. The truly original arguments presented in *Matters of Significance* go beyond attachment as they concern the nature of developmental science and its relation to ethical, cultural, legal and political issues. Jay Belsky, University of California, Davis.
