Postprint N. Katherine Hayles, 2021-02-16 Since Gutenberg's time every aspect of print has gradually changed But the advent of computational media has exponentially increased the pace transforming how books are composed designed edited typeset distributed sold and read N Katherine Hayles traces the emergence of what she identifies as the postprint condition exploring how the interweaving of print and digital technologies has changed not only books but also language authorship and what it means to be human Hayles considers the ways in which print has been enmeshed in literate societies and how these are changing as some of the cognitive tasks once performed exclusively by humans are now carried out by computational media Interpretations and meaning making practices circulate through transindividual collectivities created by interconnections between humans and computational media which Hayles calls cognitive assemblages Her theoretical framework conceptualizes innovations in print technology as redistributions of cognitive capabilities between humans and machines Humanity is becoming computational just as computational systems are edging toward processes once thought of as distinctively human Books in all their diversity are also in the process of becoming computational representing a crucial site of ongoing cognitive transformations Hayles details the consequences for the humanities through interviews with scholars and university press professionals and considers the cultural implications in readings of two novels *The Silent History* and *The Word Exchange* that explore the postprint condition Spanning fields including book studies cultural theory and media archeology *Postprint* is a strikingly original consideration of the role of computational media in the ongoing evolution of humanity

Culturally Sustainable Social Robotics M. Nørskov, J. Seibt, O.S. Quick, 2021-01-04 The subject of social robotics has enormous projected economic significance However social robots not only present us with novel opportunities but also with novel risks that go far beyond safety issues It is a potentially highly disruptive technology which could negatively affect the most valuable parts of the fabric of human social interactions in irreparable ways Since engineering educations do not yet offer the necessary competences to analyze holistically assess and constructively mitigate these risks

new alliances must be established between engineering and SSH disciplines with special emphasis on the humanities i.e. disciplines specializing in the analysis of socio cultural interactions and human experience The Robophilosophy Conference Series was established in 2014 with the purpose of creating a new forum and catalyzing the research discussion in this important area of applied humanities research with focus on robophilosophy Robophilosophy conferences have been the world's largest venues for humanities research in and on social robotics The book at hand presents the proceedings of Robophilosophy Conference 2020 Culturally Sustainable Social Robotics the fourth event in the international biennial Robophilosophy Conference Series which brought together close to 400 participants from 29 countries The speakers of the conference whose contributions are collected in this volume were invited to offer concrete proposals for how the Humanities can help to shape a future where social robotics is guided by the goals of enhancing socio cultural values rather than by utility alone The book is divided into 3 parts Abstracts of Plenaries which contains 6 plenary sessions Session Papers with 44 papers under 8 thematic categories and Workshops containing 25 items on 5 selected topics Providing concrete proposals from philosophers and other SSH researchers for new models and methods this book will be of interest to all those involved in developing artificial social agents in a culturally sustainable way that is also a fortiori ethically responsible

Moral design and technology Bart Wernaart, 2023-08-14 When should a surveillance system that is used in preventive policing sacrifice the privacy of citizens to prevent criminality What should be the impact of individual moral expectations when a social media platform designs an algorithm To what degree can we use technology driven deception in dementia care practices And can we create a moral compass for a dashboard society Over the last decade the impact of technological innovation has been unprecedented It has profoundly changed the way we participate and interact in society It has also led to new moral challenges Not only because of the technology itself but also because this technology is used in the context of a globalised world with a more prominent role for the private sector This can result in moral confusion individuals who alternately assume the role of citizen and consumer feel unable to influence the design of technology that has a strong impact on their core values Sustaining this moral confusion is in nobody's long term interest In this book we propose to overcome this moral confusion by using a bottom up design approach that incubates ethics when constructing new technologies This book is composed of four parts In the first part we focus on how to integrate moral decisions and morality in the design process of new technology In the second part we assess how moral design relates to related discourse including business ethics law and policy In the third part of this book various case studies are highlighted that focus on particular moral design issues at the crossroads of technological innovation in the public and private sector In the last part we look ahead and discuss what the future might look like if we use moral design as a central approach in creating new technology This book is relevant for IT and engineering professionals business leaders and policymakers with innovation in their portfolios and students of applied science who are interested in the moral design of technology The chapters are written by

experts and leading researchers in an attractive accessible and practical writing style Each chapter offers colourful examples and challenges the reader to critically think through moral decision making and the design of innovation See also the inaugural speech of Bart Wernaart on Moral Designs on YouTube *Ethics, Technology, and Engineering* Ibo van de Poel, Lamber Royakkers, 2023-08-28 Explore the moral and ethical issues which arise at the intersection of novel technology and engineering In *Ethics Technology and Engineering An Introduction* a team of distinguished researchers delivers an insightful and thought provoking exploration of some of the toughest ethical questions found at the crossroads of engineering and technology The book demonstrates the skills necessary to effectively grapple with ethical issues that arise from the practice of engineering The authors introduce the ethical cycle a unique and systematic approach to dealing with ethical problems They utilize numerous real life case studies from the United States Europe and elsewhere to shed important light on the ethical issues that arise in the daily work of practicing engineers They also provide a comprehensive overview of various ethical frameworks used in engineering including utilitarianism deontological ethics virtue ethics Ubuntu and Confucianism Readers will also find A thorough introduction to a practice oriented approach to ethical decision making in engineering Comprehensive explorations of the ethical cycle an approach that encourages students to consider a diversity of ethical viewpoints and come to reasoned and justified judgments Practical discussions of ethical issues in engineering design technological risks and moral responsibility Treatments of sustainability and how it affects professionals working in engineering as well as responsible innovation Perfect for engineers technologists and entrepreneurs *Ethics Technology and Engineering An Introduction* will also benefit businesspeople and founders interested in the ethical implications of a variety of fascinating new technologies *GOVERNANCE OF/THROUGH BIG DATA.
