Drawing Stars And Building Polyhedra:

Drawing Stars & Building Polyhedra Christopher M. Freeman, 2005-06-01 Using this book students learn to draw stars with seven eight or more points and formulate conjectures about their mathematical structure They also assemble polygons into 3 D polyhedra and develop spatial intuition Drawing Stars Students develop a definition of star and find a procedure for drawing stars with seven eight nine or more points They also use stars to illustrate multiplication for example 2×4 describes two overlapping squares that form an 8 pointed star Students discern mathematical properties of stars They distinguish continuous stars which can be drawn without lifting pencil from paper from stars that consist of overlapping copies of simpler stars Students formulate a conjecture that uses the Greatest Common Factor to predict whether a particular star will be continuous or overlapping Building Polyhedra Students assemble equilateral triangles squares pentagons hexagons octagons and decagons to form symmetrical 3 D solids called polyhedra This book allows students to experiment for themselves Some combinations don't work but students enjoy discovering the combinations that do fit together Students develop spatial intuition that applies to the structure of molecules to playground climbing equipment and to geodesic domes The book provides reproducible handouts of polygons to photocopy onto colored paper Students cut out the polygons fold the flaps and attach them with small staplers Completed polyhedra make an attractive wall display These activities meet four distinct NCTM standards

begins with a homage to the architect Zaha Hadid who died on March 31st 2016 a few weeks before the opening of a large exhibition of her works in Palazzo Franchetti in Venice where all the Mathematics and Culture conferences have taken place in the last years A large section of the book is dedicated to literature narrative and mathematics including a contribution from Simon Singh It discusses the role of media in mathematics including museums of science journals and movies Mathematics and applications including blood circulation and preventing crimes using earthquakes is also addressed while a section on mathematics and art examines the role of math in design A large selection presents photos of mathematicians and mathematical objects by Vincent Moncorge Discussing all topics in a way that is rigorous but captivating detailed but full of evocations it offers an all embracing look at the world of mathematics and culture *Regular Figures* L. Fejes

Tóth,2014-07-10 *Regular Figures* concerns the systematology and genetics of regular figures The first part of the book deals with the classical theory of the regular figures This topic includes description of plane ornaments spherical arrangements hyperbolic tessellations polyhedral and regular polytopes The problem of geometry of the sphere and the two dimensional hyperbolic space are considered Classical theory is explained as describing all possible symmetrical groupings in different spaces of constant curvature The second part deals with the genetics of the regular figures and the inequalities found in polygons also presented as examples are the packing and covering problems of a given circle using the most or least number of discs The problem of distributing n points on the sphere for these points to be placed as far as possible from each other is also discussed The theories and problems discussed are then applied to pollen grains which are transported by animals or the wind A closer look into the exterior composition of the grain shows many characteristics of uniform distribution of orifices as well as irregular distribution A formula that calculates such packing density is then explained More advanced problems such as the genetics of the protean regular figures of higher spaces are also discussed The book is ideal for physicists mathematicians architects and students and professors in geometry *Investigating Polygons and Polyhedra with*

Thinking Geometrically Thomas Q. Sibley,2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self

contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms. Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters. While some chapters use the language of groups, no prior experience with abstract algebra is presumed. The text will support an approach emphasizing dynamical geometry software without being tied to any particular software.

Building Understanding Nancy Shihnan Tseng, 2007 Beyond the Cube Jean-François Gabriel, 1997-08-12
