*Operative Manual of Endoscopic Surgery 2* A. Cuschieri, G. Buess, J. Perissat, 2013-11-11 The second volume of *Operative Manual of Endoscopic Surgery* covers some of the operative endoscopic procedures which have been introduced into clinical practice since the publication of *VoI 1* In the general section we have included an updated chapter on instrumentation and new chapters on anaesthetic management of patients undergoing endoscopic surgery and on video image and recording Both topics are of importance to the practice of endoscopic surgery and have not been adequately covered in the reported literature Volume 2 deals with endoscopic procedures in the chest and abdomen There have been significant advances in thoracoscopic surgery during the past 2 years particular references made to anatomical pulmonary resections and oesophageal resections As far as the gastrointestinal tract is concerned we have included gastric and allied operations but have not covered the colorectal region as we believe that more evaluation is needed before definitive accounts can be written on endoscopic colorectal resections especially for cancer For this reason we have decided to defer this important topic to *VoI 3* which is in preparation The same applies to laparoscopic repair of abdominal hernias The same layout has been adopted as in *VoI 1* of the series with heavy emphasis on illustrative representation of the operative steps and techniques In the diagrams on sites of trocar cannulae we have indicated not only the site and size but also the functional role of each port
