### **Image Processing and Data Analysis with ERDAS IMAGINE®** Stacy A.C. Nelson, Siamak Khorram, 2018-10-03

Remotely sensed data in the form of digital images captured from spaceborne and airborne platforms provide a rich analytical and observational source of information about the current status as well as changes occurring in on and around the Earth's surface. The data products or simply images processed from these platforms provide an additional advantage in that geographic areas or regions of interest can be revisited on a regular cycle. This revisit cycle allows geospatial analysts and natural resource managers to explore changing conditions over time. Image Processing and Data Analysis with ERDAS IMAGINE explains the principles behind the processing of remotely sensed data in a simple, easy-to-understand and how to format. Organized as a step-by-step guide with exercises adapted from original research and using publicly available imagery such as NASA Landsat, ESA Sentinel 2, Orthophotos and others, this book gives readers the ability to quickly gain the practical experience needed to navigate the ERDAS IMAGINE software as well as learn certain applications in Esri's ArcMap, ArcGIS for Desktop software and Quantum GIS (QGIS) open source applications package. It also helps readers to easily move beyond the information presented in this book and tackle more advanced skills. Written by two professors with long experience in remote sensing and image processing, this book is a useful guide and reference for both undergraduate and graduate students, researchers, instructors, managers and agency professionals who are involved in the study of Earth systems and the environment.

A Research Guide to Cartographic Resources Eva H. Dodsworth, 2018-09-22. The interdisciplinary uses of traditional cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields. A Research Guide to Cartographic Resources navigates the numerous American and Canadian cartographic resources available in print and online, offering researchers, academics and students with information on how to locate and access the large variety of resources, new and old. Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations. A Research Guide to Cartographic Resources consists of 18 chapters, two appendices and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides, including cartographic categories such as atlases, dictionaries, gazetteers, handbooks, maps, plans, GIS data and other related material. Almost all of the resources listed in this guide are categorized by geography down to the county level, making efficient work of the type of material required to meet the information needs of those interested in researching place-specific cartographic-related resources. Additionally, this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries, geospatial centers and their related websites. Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level. *Understanding Invasive Species in the Galapagos Islands* María de Lourdes Torres, Carlos F. Mena, 2018-02-15 This book investigates the introduction of invasive species and their behavior in oceanic islands How can we define invasive species What is their history How did they come to dominate and transform ecosystems These are relevant questions when trying to understand the behavior of invasive species primarily in fragile ecosystems such as islands and to understand the biological ecological social and economic impacts of invasions We chose the Galapagos Islands a place well known to be unique in the study of evolution as a laboratory to analyze the interactions between invasive and endemic species to understand the makeup of the ecosystems emerging after invasions have occurred to describe the relationships of invasives with the people that live in these islands and to try to develop comprehensive analyses on this topic from multi scalar and multi disciplinary points of view For a long time the discussion has been about how proper management of the species could achieve two main goals the eradication of the species to recover affected ecosystems and the conservation of endemic species The discussion has taken on other nuances including the suggestion that an invasive species when it is already adapted to an ecosystem forms an integral part of it and thus eradication would in itself go against conservation On the other hand some invasive species are not only part of the biological compound of the island ecosystems but they also form part of the social and cultural history of the inhabited islands Some of these identified by the local inhabitants are species of real or potential economic value
