With seventeen new chapters and over 1,800 figures, this new edition contains step-by-step equations that explain engineering calculations. Comprehensive revision of the coverage of human behavior in fire, including several new chapters on egress system design, occupant evacuation scenarios, combustion toxicity, and data for human behavior analysis. Revised fundamental chapters for a stronger sense of context. Added chapters on fire protection system selection and design, including selection of fire safety systems, system activation and controls, and CO₂ extinguishing systems. Recent advances in fire resistance design. Addition of new chapters on industrial fire protection, including vapor clouds, effects of thermal radiation on people, BLEVEs, dust explosions, and gas and vapor explosions. New chapters on fire load density, curtain walls, wildland fires, and vehicle tunnels. Essential reference appendices on conversion factors, thermophysical property data, fuel properties, and combustion data, configuration factors, and piping properties. Three volume set, not available separately.

Handbook of Mathematics and Statistics for the Environment Frank R. Spellman, Nancy E. Whiting, 2013-11-12. A thorough revision of the previous *Environmental Engineer's Mathematics Handbook*, this book offers readers an unusual approach to presenting environmental math concepts, emphasizing the relationship between the principles in natural processes and environmental processes. It integrates the fundamental math operations performed by environmental practitioners for air, water, wastewater, solid, hazardous wastes, biosolids, environmental economics, stormwater operations, and environmental health, safety, and welfare. New material includes quadratic equations, Boolean algebra, statistics, review of fundamental fire science, basic electricity for environmental practitioners, and environmental health computations and solutions.
