ElMaraghy,2012-12-06 The importance of proper geometric dimensioning and tolerancing as a means of expressing the designer s functional intent and controlling the inevitable geometric and dimensional variations of mechanical parts and assemblies is becoming well recognized The research efforts and innovations in the field of tolerancing design the development of supporting tools techniques and algorithms and the significant advances in computing software and hardware all have contributed to its recognition as a viable area of serious scholarly contributions The field of tolerancing design is successfully making the transition to maturity where deeper insights and sound theories are being developed to offer explanations and reliable implementations are introduced to provide solutions Machine designers realized very early that manufacturing processes do not produce the nominal dimensions of designed parts The notion of associating a lower and an upper limit referred to as tolerances with each dimension was introduced Tolerances were specified to ensure the proper function of mating features Fits of mating features included clearances location fits and interference fits with various sub grades in each category assigned a tolerance value depending on the nominal size of the mating features During the inspection process a part is rejected if a dimension fell outside the specified range As the accuracy requirements in assemblies became tighter designers had to consider other critical dimensions and allocate tolerances to them in order to ensure the assembly s functionality Geometric Patterns from Roman Mosaics Robert Field,2017 Roman geometric patterns radiate symmetry and order Drawing the patterns is not just a question of mechanically copying the work of someone else square by square but of understanding the underlying structure The patterns are built up from simple elements which seem to grow and develop in an almost organic or living way This book is arranged as a series of drawing exercises

There is no better way of appreciating the skill and imagination of those artists than by drawing their designs yourself To feel how a cross grows into a swastika pattern which then grows into a complex interlocking design is something which can only be experienced at first hand This second edition incorporates the same drawing led approach to learning about the subject and as such is invaluable in using the designs for contemporary mosaic or pattern design New photographs and updated text strengthen this approach further Ideal for schools shops in or near Roman remains and historical and art design sections of shops

Roller, 2011-09-01 In 1950 the University of Pennsylvania Museum of Archaeology and Anthropology began excavations at the ancient Phrygian capital of Gordion in central Turkey The Museum's Gordion Project continues today with researchers from many disciplines and with many specializations contributing to a growing and sometimes changing body of information and understanding about this complex and multifaceted site inhabited by peoples and diverse civilizations for millennia In this volume of Gordion Special Studies Lynn E Roller focuses on a series of stone blocks with incised figural and abstract drawings recovered from early Phrygian structures at Gordion The great majority of the incised stones come from a single structure within the Early Phrygian citadel at Gordion known as Megaron 2 a stone building with several remarkable features and a likely candidate for the citadel's temple The volume begins with a description of the excavation of the stones and a discussion of Megaron 2 Next is an analysis of the subject matter of the drawings by type describing scenes of human figures animals architectural drawings geometric patterns and formless marks A discussion follows of the sources from which the drawings could have been taken and of parallels with similar scenes and designs on objects in other media from Gordion and other contemporary sites in Anatolia The fourth section proposes an explanatory hypothesis on the origin of the drawings and considers who could have made them and why Parallels with comparable drawings from Anatolia and the Near East are discussed here The final section summarizes the contribution of the drawings to our understanding of the development of the Early Phrygian material at Gordion University Museum Monograph 130

In-Between: Architectural Drawing and Imaginative Knowledge in Islamic and Western Traditions Hooman Koliji, 2016-03-09 Contemporary technical architectural drawings in establishing a direct relationship between the drawing and its object tend to privilege the visible physical world at the expense of the invisible intangible ideas and concepts including that of the designer's imagination As a result drawing may become a utilitarian tool for documentation devoid of any meaningful value in terms of a kind of knowledge that could potentially link the visible and invisible This book argues that design drawings should be recognized as intermediaries mediating between the world of ideas and the world of things spanning the intangible and tangible The notion of the Imaginal as an intermediary between the invisible and visible is discussed showing how architectural drawings lend themselves to this notion by performing as creative agents contributing not only to the physical world but also penetrating the realm of concepts The book argues that

this in between quality to architectural drawing is essential and that it is critical to perceive drawings as subtle bodies that hold physical attributes for example form proportion color highly evocative yet with no matter Focusing on Islamic geometric architectural drawings both historical and contemporary it draws on key philosophical and conceptual notions of imagination from the Islamic tradition as these relate to the creative act In doing so this book not only makes important insights into the design process and act of architectural representation but more broadly it adds to debates on philosophies of the imagination linking both Western and Islamic traditions
