The Best Writing on Mathematics 2017 Mircea Pitici, 2017-10-31. The year's finest mathematics writing from around the world. This annual anthology brings together the year's finest mathematics writing from around the world. Featuring promising new voices alongside some of the foremost names in the field, *The Best Writing on Mathematics 2017* makes available to a wide audience many articles not easily found anywhere else, and you don't need to be a mathematician to enjoy them. These writings offer surprising insights into the nature, meaning, and practice of mathematics today. They delve into the history, philosophy, teaching, and everyday occurrences of math and take readers behind the scenes of today's hottest mathematical debates. Here Evelyn Lamb describes the excitement of searching for incomprehensibly large prime numbers; Jeremy Gray speculates about who would have won math's highest prize, the Fields Medal, in the nineteenth century; and Philip Davis looks at mathematical results and artifacts from a business and marketing viewpoint. In other essays, Noson Yanofsky explores the inherent limits of knowledge in mathematical thinking; Jo Boaler and Lang Chen reveal why finger counting enhances children's receptivity to mathematical ideas; and Carlo Squin and Raymond Shiau attempt to discover how the Renaissance painter Fra Luca Pacioli managed to convincingly depict his famous rhombicuboctahedron, a twenty-six-sided Archimedean solid. And there's much, much more. In addition to presenting the year's most memorable writings on mathematics, this must-have anthology includes a bibliography of other notable writings and an introduction by the editor, Mircea Pitici. This book belongs on the shelf of anyone interested in where math has taken us and where it is headed.

*In-Between: Architectural Drawing and Imaginative Knowledge in Islamic and Western Traditions* Hooman Koliji, 2016-03-09. Contemporary technical architectural drawings, in establishing a direct relationship between the drawing and its object, tend to privilege the visible physical world at the expense of the invisible, intangible ideas and concepts, including that of the designer's imagination. As a result, drawing may become a utilitarian tool for documentation, devoid of any meaningful value in terms of a kind of knowledge that could potentially link the visible and invisible. This book argues that design drawings should be recognized as intermediaries, mediating between the world of ideas and the world of things, spanning the intangible and tangible. The notion of the Imaginal as an intermediary between the invisible and visible is discussed, showing how architectural drawings lend themselves to this notion by performing as creative agents, contributing not only to the physical world but also penetrating the realm of concepts. The book argues that this in-between quality to architectural drawing is essential and that it is critical to perceive

drawings as subtle bodies that hold physical attributes for example form proportion color highly evocative yet with no matter Focusing on Islamic geometric architectural drawings both historical and contemporary it draws on key philosophical and conceptual notions of imagination from the Islamic tradition as these relate to the creative act In doing so this book not only makes important insights into the design process and act of architectural representation but more broadly it adds to debates on philosophies of the imagination linking both Western and Islamic traditions
