**Diseases** Michel Tibayrenc,2010-12-17 Genetics and Evolution of Infectious Diseases is at the crossroads between two major

scientific fields of the 21st century evolutionary biology and infectious diseases The genomic revolution has upset modern biology and has revolutionized our approach to ancient disciplines such as evolutionary studies In particular this revolution is profoundly changing our view on genetically driven human phenotypic diversity and this is especially true in disease genetic susceptibility Infectious diseases are indisputably the major challenge of medicine When looking globally they are the number one killer of humans and therefore the main selective pressure exerted on our species Even in industrial countries infectious diseases are now far less under control than 20 years ago The first part of this book covers the main features and applications of modern technologies in the study of infectious diseases The second part provides detailed information on a number of the key infectious diseases such as malaria SARS avian flu HIV tuberculosis nosocomial infections and a few other pathogens that will be taken as examples to illustrate the power of modern technologies and the value of evolutionary approaches Takes an integrated approach to infectious diseases Includes contributions from leading authorities Provides the latest developments in the field

**Infectious Inequalities** Qijun Han, Daniel R. Curtis, 2021-12-24 This book explores societal vulnerabilities highlighted within cinema and develops an interpretive framework for understanding the depiction of societal responses to epidemic disease outbreaks across cinematic history Drawing on a large database of twentieth and twenty first century films depicting epidemics the study looks into issues including trust distrust and mistrust different epidemic experiences down the lines of expertise gender and wealth and the difficulties in visualizing the invisible pathogen on screen The authors argue that epidemics have long been presented in cinema as forming a point of cohesion for the communities portrayed as individuals and groups from below represented as characters in these films find solidarity in battling a common enemy of elite institutions and authority figures Throughout the book a central question is also posed cohesion for whom which sheds light on the fortunes of those characters that are excluded from these expressions of collective solidarity This book is a valuable reference for scholars and students of film studies and visual studies as well as academic and general readers interested in topics of films and history and disease and society The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

**Parasite-Stress Theory of Values and Sociality** Randy Thornhill, Corey L. Fincher, 2014-07-17 This book develops and tests an ecological and evolutionary theory of the causes of human values the core beliefs that guide people's cognition and behavior and their variation across time and space around the world We call this theory the parasite stress theory of values or the parasite stress theory of sociality The evidence we present in our book indicates that both a wide span of human affairs and major aspects of human cultural diversity can be understood in light of variable parasite infectious disease stress and the range of value systems evoked by variable parasite stress The same evidence supports the hypothesis that people have psychological adaptations that function to adopt values dependent upon local infectious disease adversity The authors have identified key variables variation in infectious disease adversity and in the core values it evokes for understanding these

topics and in novel and encompassing ways Although the human species is the focus in the book evidence presented in the book shows that the parasite stress theory of sociality informs other topics in ecology and evolutionary biology such as variable family organization and speciation processes and biological diversity in general in non human animals
