most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms which extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form. We discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, automatic summarization and indexing and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on NLP tools and methods for processing the non-traditional information from social media data that is available in large amounts, big data, and shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, healthcare, business intelligence, industry marketing and security and defence. We review the existing evaluation metrics for NLP and social media applications and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics such as SemEval tasks or by the National Institute of Standards and Technology via the Text REtrieval Conference (TREC) and the Text Analysis Conference (TAC). In the concluding chapter we discuss the importance of this dynamic discipline and its great potential for NLP in the coming decade in the context of changes in mobile technology, cloud computing, virtual reality and social networking. In this second edition we have added information about recent progress in the tasks and applications presented in the first edition. We discuss new methods and their results. The number of research projects and publications that use social media data is constantly increasing due to continuously growing amounts of social media data and the need to automatically process them. We have added 85 new references to the more than 300 references from the first edition. Besides updating each section we have added a new application, digital marketing, to the section on media monitoring and we have augmented the section on healthcare applications with an extended discussion of recent research on detecting signs of mental illness from social media.

Natural Language Generation Ehud Reiter, 2024-10-15

In late 2022 the prominence of Natural Language Generation (NLG) surged with the advent of advanced language models like ChatGPT. While these developments have captivated both academic and commercial sectors, the focus has predominantly been on the latest innovations, often overlooking the rich history and foundational work in NLG. This book aims to provide a comprehensive overview of NLG, encompassing not only language models but also alternative approaches, user requirements, evaluation methods, safety and testing protocols, and practical applications. Drawing on decades of NLG research, the book is designed to be a valuable resource for both researchers and developers, offering insights that remain relevant far beyond the current technological landscape. Natural Language Generation focuses on data to text but also looks at other types of NLG including text summarization. The book takes a holistic approach to NLG, looking at requirements, what users are looking for, design, data issues, testing, evaluation, safety and ethical issues as well as technology. The holistic approach is unique to this book and is

very valuable for people building real world NLG systems and for academics and researchers who are interested in applied NLG The author who previously co authored a seminal NLG book in 2000 emphasizes high level concepts and methodologies ensuring the material s longevity and utility The book is structured to balance technical depth with practical relevance including chapters on rule based and neural NLG approaches user requirements rigorous evaluation techniques and safety considerations Real world applications particularly in journalism business intelligence summarization and medicine are explored to illustrate NLG s potential and scalability With personal anecdotes and examples from the author s experiences this book provides a unique and engaging perspective on the evolving field of NLG making it an indispensable guide for those looking to harness the power of language generation technologies

**Vector Semantics** András Kornai,2023-01-07 This open access book introduces Vector semantics which links the formal theory of word vectors to the cognitive theory of linguistics The computational linguists and deep learning researchers who developed word vectors have relied primarily on the ever increasing availability of large corpora and of computers with highly parallel GPU and TPU compute engines and their focus is with endowing computers with natural language capabilities for practical applications such as machine translation or question answering Cognitive linguists investigate natural language from the perspective of human cognition the relation between language and thought and questions about conceptual universals relying primarily on in depth investigation of language in use In spite of the fact that these two schools both have linguistics in their name so far there has been very limited communication between them as their historical origins data collection methods and conceptual apparatuses are quite different Vector semantics bridges the gap by presenting a formal theory cast in terms of linear polytopes that generalizes both word vectors and conceptual structures by treating each dictionary definition as an equation and the entire lexicon as a set of equations mutually constraining all meanings
