Levy,2014-07-15 The apparently accelerating arms race between the United States and the Soviet Union and the precarious political conditions existing in many parts of the world have given rise to new anxiety about the possibility of military confrontation between the superpowers Despite the fateful nature of the risk we have little knowledge as Jack S Levy has pointed out of the conditions processes and events which might combine to generate such a calamity No empirically confirmed theory of the causes of war exists and the hypotheses often contradictory that have been proposed remain untested As a step toward the formulation of a theory of the causes of war that can be tested against historical experience Levy has developed a unique data base that will serve as an invaluable resource for students of international conflict in coming years War in the Modern Great Power System provides a much needed perspective on the major wars of the past In this thorough and systematic study Levy carefully defines the Great Power concept and identifies the Great Powers and their international wars since the late fifteenth century The resulting compilation of war data is unique because of its five century span and its focus on a well defined set of Great Powers Turning to a quantitative analysis of the characteristics patterns and trends in war Levy demonstrates that although wars between the Great Powers have become increasingly serious in every respect but duration over the last five hundred years their frequency has diminished He rejects the popular view that the

twentieth century has been the most warlike on record and he demonstrates that it instead constitutes a return to the historical norm after the exceptionally peaceful nineteenth century Applying his data to the question whether war is contagious he finds that the likelihood of war is indeed highest when another war is under way but that this contagious effect disappears after the first war is over Contrary to the popular war weariness theory he finds no evidence that war generates an aversion to subsequent war This study extending the scientific analysis of war back over five centuries of international history constitutes a major contribution to our knowledge of international conflict

**Military Power** Stephen Biddle, 2010-12-16 In war do mass and materiel matter most Will states with the largest best equipped information technology rich militaries invariably win The prevailing answer today among both scholars and policymakers is yes But this is to overlook force employment or the doctrine and tactics by which materiel is actually used In a landmark reconception of battle and war this book provides a systematic account of how force employment interacts with materiel to produce real combat outcomes Stephen Biddle argues that force employment is central to modern war becoming increasingly important since 1900 as the key to surviving ever more lethal weaponry Technological change produces opposite effects depending on

how forces are employed to focus only on materiel is thus to risk major error with serious consequences for both policy and scholarship In clear fluent prose Biddle provides a systematic account of force employment s role and shows how this account holds up under rigorous multimethod testing The results challenge a wide variety of standard views from current expectations for a revolution in military affairs to mainstream scholarship in international relations and orthodox interpretations of modern military history Military Power will have a resounding impact on both scholarship in the field and on policy debates over the future of warfare the size of the military and the makeup of the defense budget
