The New Genetic Medicine Thomas Anthony Shannon, James J. Walter, 2003 Since the 1970s the interrelated areas of medical genetics and biotechnology have developed dramatically and afforded increased control over the design of living organisms From the very beginning controversies over these techniques and their applications to plants animals and humans have raged in many disciplines including science philosophy ethics and religion This book brings together the seminal essays of two leading Catholic moral theologians Thomas Shannon and James Walter in an effort to identify the key ethical and theological questions raised by the new genetic medicine What is unique about this book is that it specifically and directly brings modern genetics and the Roman Catholic theological and ethical tradition into dialogue While the authors argue that the Catholic tradition has much to offer in putting this current scientific revolution into perspective they well understand the need to avoid merely repeating the tradition in favor of bringing the best of the tradition to bear on the precise questions posed by modern genetic technology

Religious Methods and Resources in Bioethics P.F. Camenisch, 2013-03-09 A volume on religious theological methods in biomedical ethics inevitably of whether the methodological dimension can be distinguished from the various other things that go on in ethical

discourse It is difficult to answer this question definitively since many elements in moral conversation can be interpreted in different ways Barbara Hilbert Andolsen illustrates this issue in this volume when she defines one of her crucial categories gender justice as being both procedural and substantive normative This difficulty of finally separating the methodological from the normative arises in many areas of contemporary ethical writing both feminist and otherwise Nevertheless it seems that in many cases we can separate out the methodological issues with considerable precision Albert Jonsen and James Childress achieve just such a sharp focus in their essays This does not mean that a careful dissecting of their papers would not reveal normative elements lurking about their methodological points It is simply to say that the issues they analyze and the positions they take are at least prima facie overwhelmingly methodological They are much more about how we think about ethical matters than they are about what we think about them Bibliography of the History of Medicine ,1984

The Space that Separates: A Realist Theory of Art Nick Wilson,2019-08-23 The Space that Separates A Realist Theory of Art radically challenges our assumptions about what art is what art does who is doing it and why it matters Rejecting the modernist and market driven misconception that art is only what artists do Wilson instead presents a realist case for living artfully Art is defined as the skilled practice of giving shareable form to our experiences of being in relation with the real that is to say the causally generative domain of the world that extends beyond our direct observation comprising relations structures mechanisms possibilities powers processes systems forces values ways of being In communicating such aesthetic experience we behold life's betweenness the space that separates so coming to know ourselves as connected Providing the first dedicated and comprehensive account of art and aesthetics from a critical realist perspective Aesthetic Critical Realism ACR Wilson argues for a profound paradigm shift in how we understand and care for culture in terms of our systems of value recognition Fortunately we have just the right tool to help us achieve this transformation and it's called art Offering novel explanatory accounts of art aesthetic experience value play culture creativity artistic truth and beauty this book will appeal to a wide audience of students and scholars of art aesthetics human development philosophy and critical realism as well as cultural practitioners and policy makers
