Stevens, 2016-04-19 With contributions by international experts in academia chemical manufacturing government research laboratories regulatory agencies and private consulting this guide explores the potentially damaging influence of environmental agents on the endocrine system It examines endocrine toxicology s increased importance in environmental safety issues

Endocrine Toxicology, Second Edition John A. Thomas, 1997-01-29 This text presents a range of topics from the molecular events surrounding hormone actions to epidemiologic studies of the effects of environmental and occupational chemicals on reproductive organs The endocrine systems covered include the adrenal cortex thyroid and parathyroid gonads and the endocrine pancreas Of particular importance are the chapters covering the general characteristics of the estrogen receptors and the androgen receptors The book also describes some of the underlying toxic mechanisms involving pancreatic B cells and metal induced changes in male sex accessory glands

Endocrine and Hormonal Toxicology Philip W. Harvey, Kevin C. Rush, Andrew Cockburn, 1999-06-18 Endocrine and Hormonal Toxicology Edited by Philip W Harvey Kevin C Rush and Andrew Cockburn AgrEvo UK Ltd Saffron Walden UK This is the first book to consider the integrated role of the classical endocrine system and hormones including those from tissues outside the classical endocrine system in toxicological responses Although focusing on the latest knowledge on endocrine glands as target organs and the mechanistic and molecular basis for toxicity in these organs Endocrine and Hormonal Toxicology has been written to cover toxicological responses at the whole body level mediated by endocrine or hormonal mechanisms This whole body multi organ approach significantly broadens the relevance of this volume to toxicologists Following an introductory section on the types of endocrine toxicity including primary secondary and indirect mechanisms the next section deals with endocrine organs as toxicological targets International contributions focus on the pituitary thyroid and parathyroids adrenals testes ovaries and the pancreas and comparative endocrine carcinogenesis A third section of the book develops the whole body approach in which chapters are devoted to hormonal mechanisms of toxicity to the immune nervous cardiovascular gastrointestinal and reproductive systems as well as to the liver kidney and skin The final section covers human and environmental health perspectives discussing endocrine disrupting chemicals hormonal mechanisms in breast cancer and current regulatory trends in endocrine and hormonal toxicology The comprehensive nature of Endocrine and Hormonal Toxicology makes it accessible to both specialist and general toxicologists and to those within the fields of endocrinology pharmacology and pathology

Challenges in Endocrine Disruptor Toxicology and Risk Assessment Alberto Mantovani, Alexandra Fucic, 2020-12-08 Insight into the role of hormones particularly estrogen and testosterone in health and disease etiology including interactions with other hormone pathways has dramatically changed Estrogen and androgen receptors with their polymorphisms are key molecules in all tissues and are involved in a number of homeostatic mechanisms but also pathological processes including carcinogenesis

and the development of metabolic and neurological disorders such as diabetes and Alzheimer's disease. Endocrine disrupting chemicals (EDCs) can interfere with the endocrine hormone systems at certain dosages and play a key role in the pathology of disease. Most known EDCs are manmade and are therefore an increasing concern given the number commonly found in household products and the environment. This book will cover the mechanisms of EDC pathology across the spectrum of disease as well as risk assessment and government and legal regulation to provide a holistic view of the current issues and cutting edge research in the topic. With contributions from global leaders in the field, this book will be an ideal reference for toxicologists, endocrinologists, and researchers interested in developmental biology, regulatory toxicology, and the interface between environment and human health. *An Introduction to Interdisciplinary Toxicology* Carey N. Pope, Jing

Liu, 2020-02-18. *An Introduction to Interdisciplinary Toxicology: From Molecules to Man* integrates the various aspects of toxicology from simple molecular systems to complex human communities with expertise from a spectrum of interacting disciplines. Chapters are written by specialists within a given subject such as a chemical engineer, nutritional scientist, or a microbiologist, so subjects are clearly explained and discussed within the toxicology context. Many chapters are comparative across species so that students in ecotoxicology learn mammalian toxicology and vice versa. Specific citations, further reading, study questions, and other learning features are also included. The book allows students to concurrently learn concepts in both biomedical and environmental toxicology fields, thus better equipping them for the many career opportunities toxicology provides. This book will also be useful to those wishing to reference how disciplines interact within the broad field of toxicology. Covers major topics and newer areas in toxicology including nanotoxicology, Tox21, epigenetic toxicology, and organ-specific toxicity. Includes a variety of perspectives to give a complete understanding of toxicology. Written by specialists within each subject area, e.g., a chemical engineer, to ensure concepts are clearly explained. **Endocrine Toxicology**

Sokol, 1994. **Principles and Methods of Toxicology** A. Wallace Hayes, 2007-09-25. Founded on the paradox that all things are poisons and the difference between poison and remedy is quantity, the determination of safe dosage forms the base and focus of modern toxicology. In order to make a sound determination, there must be a working knowledge of the biologic mechanisms involved and of the methods employed to define these mechanisms. **Adrenal Toxicology** Philip W.

Harvey, David J. Everett, Christopher J. Springall, 2008-10-22. Despite being regarded as the most common toxicological target in the endocrine system, the adrenal gland has often been neglected in regulatory testing. *Adrenal Toxicology* addresses the increased interest in adrenocortical toxicology and the need for a resource that makes techniques available to examine adrenal endocrine disruption. compounds H. Thomas,1995-11-21 A large number of chemical compounds are constantly being introduced and produced both to assist and ease modern human life Among these chemicals industrial compounds represent a particular fraction of chemicals which are not intended for use in biological systems but to which humans may be accidentally exposed whether in the workplace by product application or via the environment Industrial chemicals as opposed to pharmaceuticals and agrochemicals are in many cases subjected only to a very basic examination of handling safety and may lack further toxicity testing This implies that essentially nothing is known about their bioavailability metabolism excretion and toxicological properties unless problems arise Covering the investigation of industrial chemicals this book focuses on their individual structure biological fate potential toxicity to mammals and the molecular mechanisms possibly underlying their adverse effects by highlighting the use and significance of experimental toxicology Special emphasis is placed on mechanistic aspects in the safety assessment of industrial compounds in addition to current regulatory and legal considerations

Comprehensive Toxicology: Reproductive and endocrine toxicology I. Glenn Sipes,1997 This volume in the Comprehensive Toxicology series demonstrates how the use of extremely powerful molecular and cell biology techniques has stimulated the growth of toxicology as a scientific discipline The field of toxicology has evolved from its earlier days of in vivo and descriptive studies to focusing on mechanisms Frequently mechanisms require an examination at the cellular and molecular level Molecular toxicology has opened the door to comprehending the basic mechanisms of how toxicants show their effects The volume is a comprehensive integrated profile of the molecular effects of toxicants and the molecular mechanisms involved in producing cellular and tissue injury
