The Politics of Bad Governance in Contemporary Russia Vladimir Gel'man, 2022-07-06 In this book Vladimir Gel'man considers bad governance as a distinctive politico economic order that is based on a set of formal and informal rules norms and practices quite different from those of good governance Some countries are governed badly intentionally because the political leaders of these countries establish and maintain rules norms and practices that serve their own self interests Gel'man considers bad governance as a primarily agency driven rather than structure induced phenomenon He addresses the issue of causes and mechanisms of bad governance in Russia and beyond from a different scholarly optics which is based on a more general rationale of state building political regime dynamics and policy making He argues that although these days bad governance is almost universally perceived as an anomaly at least in developed countries in fact human history is largely a history of ineffective and corrupt governments while the rule of law and decent state regulatory quality are relatively recent matters of modern history when they emerged as side effects of state building Indeed the picture is quite the opposite bad governance is the norm while good governance is an exception The problem is that most rulers especially if their time horizons are short and the external constraints on their behavior are not especially binding tend to govern their domains in a predatory way because

of the prevalence of short term over long term incentives Contemporary Russia may be considered as a prime example of this phenomenon Using an analysis of case studies of political and policy changes in Russia after the Soviet collapse Gel man discusses the logic of building and maintaining the politico economic order of bad governance in Russia and paths of its possible transformation in a theoretical and comparative perspective *Cold War Space Sleuths* Dominic Phelan,2012-11-28 Space Sleuths of the Cold War relates for the first time the inside story of the amateur spies who monitored the Soviet space program during the Cold War It is written by many of those space sleuths themselves and chronicles the key moments in their discovery of hidden history This book shows that dedicated observers were often better than professionals at interpreting that information coming out of the USSR during the dark days of the Cold War This book takes a unique approach to the history of Soviet spaceflight looking at the personal stories of some of the researchers as well as the space secrets the Soviets tried to keep hidden The fascinating account often reads like a Cold War espionage novel Space Sleuths of the Cold War includes an impressive list of contributors such as Editor Dominic Phelan giving an overall history of the Cold War hunt for Soviet space secrets Space writer Brian Harvey reveals his own personal search through official Soviet radio and magazines to find out what they were and weren't revealing to the outside world at the height of the space race Sven Grahm from Sweden details his own 40 year quest to understand what was happening on the other side of the Iron Curtain Professional American historian Asif Siddiqi explores his own adventures in the once secret Russian archives often seeing documents never before read by Westerners Dutch cosmonaut researcher Bert Vis provides an inside account of the Yuri Gagarin training center in Moscow Belgian researcher Bart Hendrickx's details his important translation of the 1960s diaries of cosmonaut team leader General Kamanin Pioneer space sleuth James Oberge's shares his memories of his own notable scoops Paris based writer Christian Lardier recounts the efforts of French space sleuths whose work was frequently overlooked in the USA and Britain because of the language barrier **Ascending to Space** Maria A. Pozza,2024-04-22 This book explores multidisciplinary perspectives on critical issues in space from the viewpoints of New Zealand and other nations It brings together the topics examined at the Otago Foreign Policy School 2022 by both domestic and international experts in the area of space and includes the opening address on space policy delivered by the Minister of Foreign Affairs This book takes a multidisciplinary approach to New Zealand's growing space sector in conjunction with other nations perspectives on space It encompasses space science military and defence matters space tourism and astronaut rescue and international legal and policy frameworks while taking into account future considerations Readers such as academics students policy advisers diplomats government officials and others engaged in the field of space will find value in this book It will appeal to think tanks and international institutions grappling with the complexities that are presented by the outer space domain

Rockets and People: The moon race Boris Evseevich Chertok,2005 *Greedy Science* Michael D. Gordin,W. Patrick McCray,2025-02-18 On the transformative role of greed in global science and technology during the 1980s In the 1980s a

transformative era emerged where profit driven motives and an entrepreneurial spirit dominated scientific research and technological innovation This collection of essays edited by Michael D Gordin and W Patrick McCray examines how greed reshaped the global scientific community through the relentless pursuit of money fame and celebrity Profiting off science and technology was not a new phenomenon nor were the soaring ambitions of some of its most fervent advocates However the global currents of knowledge production in the 1980s saw major cultural and scientific shifts the increasing frequency of university patenting the rise of academic entrepreneurship and collaborations between industries and academia for example Greedy Science seeks to survey and understand the full range of these changes Through insightful essays contributors examine case studies ranging from the biotech boom driven by early oil firm investments to the speculative market strategies in personal computing and alternative energy This period saw the rise of the celebrity status of scientists and raised questions about the moral complexities of scientific greed The authors argue that greed was an ever present and expansive trait of science during this time encompassing a host of behaviors such as covetousness acquisitiveness rapaciousness and conspicuous consumption Greedy Science provides a nuanced analysis of how market dynamics and the quest for personal gain profoundly influenced scientific advancements and public perception during a pivotal decade in science and technology

Launius, 2012-12-28 Beginning in the early days of the Space Age well before the advent of manned spaceflight the United States followed soon by other

Offering fascinating investigations into this crucial chapter in space history, this collection of specially commissioned essays from leading historians opens new vistas in our understanding of the development of planetary science.

Dark Star Matthew H. Hersch, 2023-12-26. A captivating history of NASA's Space Transportation System, the space shuttle, chronicling the inevitable failures of a doomed design. In *Dark Star*, Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years, NASA's space shuttle. He begins with the origins of the space shuttle, a century-long effort to develop a low-cost reusable rocket-powered airplane to militarize and commercialize space travel, which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons. Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011, Hersch illustrates how the space shuttle was doomed from the start. While most historians have accepted the view that the space shuttle's fatal accidents, including the 1986 Challenger explosion, resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft, *Dark Star* reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator. The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws. Hersch's work seeks to answer the perilous questions of technological choice that confront every generation, and it is a critical read for anyone interested in how we can create a better world through the things we build.

Choice, 2008. Manned Spaceflight Log II—2006–2012 David J. Shayler, Michael D. Shayler, 2013-04-05. *Manned Spaceflight Log* discusses over 40 recent spaceflights from September 2006 through September 2012, a time of great change in human spaceflight history. Following on from *Praxis Manned Spaceflight Log 1961–2006*, the authors continue the story until the end of September 2012, with new chapters detailing the development and accomplishments of human spaceflight, expanded tables, and additional photographs, many in color throughout. The book opens with a new foreword by Colonel Alfred M. Worden, USAF Retired, NASA Astronaut and CMP of Apollo 15, which reflects on the changing history of human spaceflight and the prospects for future operations. The first chapter explains how human spaceflight has approached the different challenges of exploring space and provided the hardware to meet those challenges. This chapter also describes the various attempts to reach orbital flight and the often confusing distinction between ballistic sub-orbital and so-called astro flights of the X-15 rocket research aircraft program. Chapter 2 recalls key historic moments and missions across five decades of human spaceflight. Each decade has provided useful lessons for the next and a foundation for future achievement. The new mission entries are collected in the third section.

in chronological order A review of the next steps in human spaceflight including plans to occupy the International Space Station well into the 2020s and the growth of the Chinese manned space program including a large space station and planned base on the Moon is discussed in Chapter 4 The tables provide a complete up to date overview of human spaceflight operations and experience from April 1961 to September 2012 and a selected chronology of important milestones from those years Completing the book is a comprehensive bibliography that lists all the major Springer Praxis human spaceflight titles and other important works that provide the reader with a resource to continue further research

Космические крылья Вадим Павлович Лукашевич, Игорь Борисович Афанасьев, 2009 **The Early Effects of Radiation on DNA** E.M. Fielden, Peter O'Neill, 1991-06-28 Interest in the biological effects of ionising radiation closely followed the identification of such radiation The realisation that DNA is the site of genetic information in cells subsequently focussed attention on DNA as an important target in the lethal and mutagenic effects of ionising radiation Thus radiation effects upon DNA became an important area for fundamental scientific studies by radiation biologists chemists and physicists To a first approximation the concerns of the three disciplines can be divided by time scales the physical process of energy deposition from photon or charged particle and subsequent relaxation 10 to 10⁻¹² secs followed by chemical reactions 10 to 10⁻¹⁰ secs and finally the expression of biological effect minutes to years Thus the concept of early processes conveys different ideas to different scientists although they are all interrelated To attempt to describe in any detail all these processes is a mammoth task which is not made easier by the different conventions and experimental approaches of the three disciplines However the recent advances in all these scientific areas seemed to the organisers at least to offer the opportunity to stimulate more active interaction between physicists chemists and biologists With this in mind a multi disciplinary workshop was organised which brought together some fifty scientists to present their own specialist interests and through extensive discussion explore which problems are of high priority and require input from the different disciplines to resolve them
