**Energy and Environmental Challenges to Security** Stephen Stec, Besnik Baraj, 2009-01-25 On 21 November 2007 the grand and elegant Delegates Hall of the Hungarian Parliament was the scene of the opening of a conference to discuss some of the most pressing issues of the day those related to our unending thirst for energy its environmental consequences and the challenges that these bear on security Over the next 3 days scientists parliamentarians and their guests confronted challenged teased and cajoled each other in a NATO Advanced Research Workshop ARW entitled Energy and Environmental Challenges to Security affirming that knowledge and public service hold the keys to solving our greatest challenges The magnitude of the security challenge was confirmed while this volume was being prepared In mid 2008 the International Energy Agency issued a report concluding that US 45 trillion would be needed over the next half century to prevent energy shortages and greenhouse gas emissions from undermining global economic growth But lest such large numbers cause us all to shrug this volume brings attention to some of the more manageable aspects of the environment and energy security challenge from addressing conflict resources such as illegal timber that contribute to corruption and regional instability to means and mechanisms to enable the diversification of energy supplies to environmental risk reduction strategies for particular installations The participants in the Hungarian Parliament building were atypical for a NATO Advanced Research Workshop

**Challenges to Energy Security**, 2004 *Energy Security Challenges* Centre for Public Policy Research, 2015-06-17

The International conference on Energy Security Challenges Non Traditional Security planning in India was yet another attempt by the Centre for Public Policy Research CPPR to focus on one of the most challenging themes of current times Given its global outlook and ramifications energy security demands an integrated approach and strategic positioning especially for a country such as India Several factors have contributed to the unprecedented predominance that the energy security debate has achieved in international dialogue and diplomacy the growth of new economic power centres the fluctuating price of fossil fuels over the last three years global warming due to climate change the threat of terrorism instability in some exporting nations power blackouts and chronic shortages of power in several countries Power blackouts have occurred on the east and west coasts of the United States in Europe and in Russia while chronic shortages of electric power are being faced by China India and other developing countries Given the fundamental need for energy to fuel a country's economic growth these power crises have caused concern not only about the reliability of electricity supply systems but also raised fears of a scramble for energy supplies and heightened geopolitical rivalries Thus the situation at the global level does not seem very positive However there have been attempts by several countries to streamline and reassert state control by installing new transportation channels and pipelines hoping to offset the stark scarcity of their domestic resources through diversification trade and investment in the energy sector Energy independence is a phrase that has become a mantra since it was first articulated by Richard Nixon four weeks after the 1973 oil embargo was put in place This national aspiration

had long been at odds with reality for the United States. The real mood and the state of the nation was captured by President Obama in 2009 when he stated: At a time of such great challenge for America, no single issue is as fundamental to our future as energy. In recent years, new energy suppliers, technological developments like hydraulic fracturing and the US shale gas boom have redrawn the global energy scenario and caused significant geopolitical shifts. That energy issues are fundamental to India's future is an undeniable fact. The country's energy imports come at the cost of 7% of its GDP and is more often ruptured by the country's balance of payment, which takes an ugly turn with the fluctuations in the energy market. India, the world's fourth largest energy consumer, imports 80% of its crude oil and 25% of its natural gas requirements. Around 600 million Indians do not have access to electricity and about 700 million Indians use biomass as their primary energy source for cooking, according to Indian Government sources. India's energy demand is expected to become more than double from below 700 million tonnes of oil equivalent (mtoe) in 2013 to around 1.5 billion tonnes of oil equivalent by 2035, according to estimates made by the oil ministry. Hence, the issue of energy security is undoubtedly a major concern for India as well as the United States.

*Energy Security Challenges for the 21st Century* Gal Luft, Anne Korin, 2009-08-10. The impact of energy on global security and economy is clear and profound, and this is why in recent years energy security has become a source of concern to most countries. However, energy security means different things to different countries based on their geographic location, their endowment of resources, their strategic and economic conditions. In this book, Gal Luft and Anne Korin, with the help of twenty leading experts, provide an overview of the world's energy system and its vulnerabilities that underlay growing concern over energy security. It hosts a debate about the feasibility of resource conflicts and covers issues such as the threat of terrorism to the global energy system, maritime security, the role of multinationals and non-state actors in energy security, the pathways to energy security through diversification of sources and the development of alternative energy sources. It delves into the various approaches selected producers, consumers and transit states have toward energy security and examines the domestic and foreign policy tradeoffs required to ensure safe and affordable energy supply. The book explains the various pathways to energy security and the tradeoffs among them and demonstrates how all these factors can be integrated in a larger foreign and domestic policy framework. It also explores the future of nuclear power, the complex relations between energy security and environmental concerns, and the role for decentralized energy as a way to enhance energy security.

**East Asian Regionalism** Christopher M. Dent, 2016-06-02. East Asia is one of the world's most dynamic and diverse regions and is also becoming an increasingly coherent region through the interplay of various integrative economic, political and socio-cultural processes. The second edition has been expanded to incorporate coverage of significant issues that have emerged in recent years, including: Growing tensions in the region over maritime territory and historical issues; Competing regional free trade agreement negotiations; The impact of the global financial crisis on financial co-operation and

engagement with global governance Obama's pivot to Asia and developments in US relations with East Asia The influence of new technology and social media on micro level regional relations The growing importance of new diplomacy issues such as energy security climate change food security and international migration Key pedagogical features include end of chapter study questions case studies that discuss topical issues with study questions also provided useful tables and figures which illustrate key regional trends in East Asia Extensive summary conclusions covering the chapter's main findings from different international political economy perspectives East Asian Regionalism is an essential text for courses on East Asian regionalism Asian politics and Asian economics

Energy Security and Natural Gas Markets in Europe Tim Boersma, 2015-08-27 Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers this book presents the history of European policy making regarding energy resources including recent controversies about shale gas and fracking Using the United States as a benchmark the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states This lack of integration still prohibits natural gas to flow freely throughout the continent which makes parts of Europe vulnerable in case of supply disruptions The book demonstrates that the EU gas market has been developing at different speeds leaving the Northwest of the continent reasonably well integrated with sufficient trade and liquidity and different supplies whereas other parts are less developed In these parts of Europe there is a structural lack of investments in infrastructure interconnectors reverse flow options and storage facilities Thus even though substantial progress has been made in parts of the EU single source dependency often prevails leaving the relevant member states vulnerable to market power abuse Detailed comparisons are made of the situations in the Netherlands and Poland and of energy policy in the USA The book dismantles some of the existing assumptions about the concept of energy security and touches upon the level of rhetoric that features in most energy security and policy debates in Europe

Subcommittee on the Western Hemisphere, 2006 **Energy Security And Geopolitics In The Arctic: Challenges And Opportunities In The 21st Century** Hooman Peimani, 2013-04-01 This book sheds light on how global warming has caused the ongoing environmental disaster in the Arctic namely its melting This development if left unabated will have a major negative environmental impact not only on the Arctic itself but on the entire planet including the worsening of global warming and rising sea levels The latter is a major threat to all island countries and all countries having coastlines with open seas with major environmental social economic political and military security implications The Arctic melting is bringing about challenges while opening doors for certain opportunities These are the accessibility of the region's large oil gas and

coal reserves and minerals including rare earth elements They are in demand both in the Arctic littoral states Canada Denmark Greenland Norway Russia and USA and the Greater Arctic countries Iceland Finland and Sweden as well as in other parts of the world In particular major oil and gas importers China India Japan and South Korea are interested in the Arctic energy resources the main non regional countries with a capability to engage in the region The obvious importance of the regional energy and mineral resources makes the division of the region among the regional countries crucial The melting of the Arctic ice will also lead to the availability for at least a few months a year of a Northern Sea Route and a Northwest Passage connecting Europe to North America and the North Eastern part of Asia The importance of these northern routes and the Arctic mineral and energy resources is contributing to a growing military presence of mainly the USA and Russia in this region which could lead to an arms race This book offers invaluable insights on the issues that have grave implications for energy security and geopolitics in the arctic **Long-term Energy Security** United States.
