Energy Reduction Through Improved Maintenance Practices:

Energy Reduction Through Improved Maintenance Practices Kenneth E. Bannister, 1999 Energy Reduction through Improved Maintenance Practices offers easy to read practical guidelines on how to reduce energy costs by improving the maintenance process It carefully examines how ineffective maintenance practices adversely affect energy consumption and suggests practical strategies and solutions to use in overcoming these inefficiencies Energy savings are calculated in each of the book s nine sections and supported with actual case studies Both practitioners and non practitioners interested in internal cost reduction strategies will find this book an essential reference for achieving real energy cost savings through new methods of energy cost reduction and a reduction in equipment failure This book will also appeal to energy managers and maintenance practitioners who are looking for new ways to save costs without large capital outlay

Inspection and Training for TPM Terry Wireman, 1992 Describes four steps to implementing a Total Productive Maintenance program in chapters on preventive and predictive maintenance computer methods and other topics Also provides the basic technical information to allow operators to repair the equipment they run such as mechanical drives and fluid

Energy Efficiency Improvements in Electronic Motors and Drives Paolo Bertoldi, Anibal T. de Almeida, Hugh Falkner, 2012-12-06 The 1997 Kyoto Conference defined CO₂ emissions targets for the developed regions of the world The EU target of decreasing the emissions 8% below the 1990 level by 2010 will require a very substantial effort covering basically all activities if such a target is to be reached Energy efficient motor systems can provide one of the most important opportunities to achieve electricity savings in a cost effective way avoiding at the same time the emission of tens of millions of tons of carbon The reduction of energy consumption through improvements in energy efficiency is one of the major instruments for developed and developing countries to meet the Kyoto commitments Energy efficiency is also a key element of the European Union EU energy policy since it improves the efficiency of the economy increases energy supply

security and decreases harmful emissions due to electricity generation Electric motor systems use over half of all electricity consumed in developed countries Typically about 70% of the electricity which is used in the industrial sector and about 35% of the electricity used in the commercial sector in the EU is consumed by motor systems In industry a motor on average consumes an annual quantity of electricity which corresponds to approximately 5 times its purchase price throughout its whole life of around 12 to 20 years *Global Warming* United States. Congress. House. Committee on Energy and Commerce.
