**Hawkmoths of Australia** Maxwell Moulds, James

Tuttle, David Lane, 2020-01-20 Hawkmoths are large charismatic insects with highly variable and colourful larvae. Some species are specialised in their habitat preferences but others are widespread and often encountered in gardens. However, little is known about most species and associating the adults with their larvae has previously been difficult or impossible. *Hawkmoths of Australia* allows identification of all of the Australian hawkmoths for the first time and treats species found on mainland Australia, Tasmania and all offshore islands within Australian limits. It presents previously undescribed life histories of nearly all species and provides a comprehensive account of hawkmoth biology including new parasitoids and their hawkmoth hosts. Detailed drawings and photographs show the external and internal morphology of adults and immatures and eggs, larval instars and pupae. Keys are provided for last instar larvae and pupae of the 71 species that the authors have reared. The book is concluded by a glossary, appendices to parasitoids and larval foodplants, an extensive reference list with bibliographical notes and a comprehensive index. The wealth of new information in this book makes it an essential reference for anyone interested in these moths. *Hawkmoths of Australia* is Volume 13 of the *Monographs on Australian Lepidoptera Series*.

*Insects as Service Providers* Omkar, 2022-12-08 This book overviews the role of insects in providing various human environmental, recreational, aesthetic and cultural services. It presents a comprehensive account of insect service providers to show different aspects of insects and cultivate the appreciation of insects. Insects are beneficial to humans as ecofriendly tools as parasitoids and predators in the biological control of insect pests and vectors, reducing the use of agrochemicals in modern agriculture and protecting the environment. Insects facilitate crop pollination and increase the agricultural yield. They are farmers' friends and serve as food for the human population worldwide. Insects provide pharmaceuticals, take part in ecosystem services and work as scavengers. Insects are used in disease therapy and wound healing. They are also helpful in criminal investigations and are the best models for research and technology innovations. Insects also yield various silks, lac, honey, propolis, wax etc., promoting insect tourism, recreations and culture. This contributed volume focuses on these different beneficial aspects of insects in human life. This book will be of interest to undergraduate and postgraduate students of entomology, agricultural zoology, researchers and anyone interested in insects including policy planners.
