Astronomy Colin A. Ronan, 1979 Solar System Vaibhav Chawadre, 2014-10-09 The Solar System formed 4.6 billion years ago from the gravitational collapse of a giant molecular cloud. The vast majority of the system's mass is in the Sun, with most of the remaining mass contained in Jupiter. The four smaller inner planets—Mercury, Venus, Earth, and Mars—also called the terrestrial planets, are primarily composed of rock and metal. The four outer planets, called the gas giants, are substantially more massive than the terrestrials. The two largest, Jupiter and Saturn, are composed mainly of hydrogen and helium; the two outermost planets, Uranus and Neptune, are composed largely of substances with relatively high melting points compared with hydrogen and helium, called ices, such as water, ammonia, and methane, and are often referred to separately as ice giants. All planets have almost circular orbits that lie within a nearly flat disc called the ecliptic plane. **Planetary Sciences** Imke de Pater, Jack J. Lissauer, 2015-01-29 An authoritative introduction for graduate students in the physical sciences, this award-winning textbook explains the wide variety of physical, chemical, and geological processes that govern the motions and properties of planets. This updated second edition has been revised and improved while maintaining its existing structure and organization. Many data tables and plots have been updated to account for the latest measurements. A new Appendix focuses on recent discoveries since the second edition was first published. These include results from Cassini, Kepler, MESSENGER, MRO, LRO, Dawn at Vesta, Curiosity, and others, as well as many ground-based observatories. With over 300 exercises to help students apply the concepts covered, this textbook is ideal for graduate courses in astronomy, planetary science, and earth science, and well-suited as a reference for researchers. Color versions of many figures, movie clips, supplementing the text, and other resources are available at www.cambridge.org/dePater. The Moon Mark Day, 2020-05-17 Look up into the sky on any cloudless night and chances are you'll see the Moon. Our glowing neighbor in space is as familiar to us as the Sun and the stars. You may even have imagined walking on its surface. But how much do you really know about the Moon? You may already know that the Moon is our planet's only natural satellite that it circles the Earth, and that we can watch it go through phases from round and full to thin like a sickle. But do you know how high you could jump on the Moon? Or what the Moon's seas are made of? Or what would happen if we didn't have the Moon? Hint: Our days would be a lot shorter. Or how about whether people will ever visit the Moon again? Read on to find the answers to these fascinating questions and much more. **Moons of the Solar System** John Stewart, 1991 The first half of this book is devoted to Earth's moon, Luna. General statistical data are followed by an alphabetical listing of such subjects as eclipses, lunar spacecraft landings, phenomena, mapping, and the hundreds of small and large surface features with the sources of their names. The second half is about the 66 other known moons of the solar system, arranged alphabetically according to their accepted names as of February 1991. Each description includes the size of the moon, date of discovery, and other statistical information. The photographs are supplied by the U.S. Geological Survey, Department of the Interior, the National Aeronautics and Space Administration, and the Jet Propulsion Laboratory. **Solar Planetary Systems** Asit B. Bhattacharya, Jeffrey M. Lichtman, 2016-11-25 The authors have put forth

great efforts in gathering present day knowledge about different objects within our solar system and universe This book features the most current information on the subject with information acquired from noted scientists in this area The main objective is to convey the importance of the subject and provide detailed information on the physical makeup of our planetary system and technologies used for research Information on educational projects has also been included in the Radio Astronomy chapters This information is a real plus for students and educators considering a career in Planetary Science or for increasing their knowledge about our planetary system
