Health and Sustainability Tee L. Guidotti, 2015-02-27 Health and sustainability have become ubiquitous topics in all realms of popular discourse What these discussions often overlook is the fact that the two concepts are interrelated and that their surrounding policies and practices can often inform and reinforce each other As sustainability measures are already in place across many levels of government there is now an opportunity to extend these principles to improve health care and health care policy Health and Sustainability An Introduction details how the values of sustainability can be applied to the design of health systems and the delivery of primary care By providing a practical framework for understanding complicated sustainability problems related to health the book offers an authoritative resource for understanding health and environmental rights parallels between human toxicology and ecotoxicology how health promotion strategy can be a template for sustainability health science and how it can be used to support decisions in health and sustainability how scientific knowledge is achieved understood accepted and used in health and environmental advocacy and how this relates to sustainability Students and practitioners in health will benefit from this introduction to sustainability and those in sustainability and environmental studies will benefit from this application to human health Health and Sustainability offers a roadmap for successfully integrating these approaches for healthier people and environment

Climate Crisis and the Global Green New Deal Noam Chomsky, Robert Pollin, 2020-09-22 The environmental crisis under way is unique in human history It is a true existential crisis Those alive today will decide the fate of humanity Meanwhile the leaders of the most powerful state in human history are dedicating themselves with passion to destroying the prospects for organized human life At the same time there is a solution at hand which is the Green New Deal Putting meat on the bones of the Green New Deal starts with a single simple idea we have to absolutely stop burning fossil fuels to produce energy within the next 30 years at most and we have to do this in a way that also supports rising living standards and expanding opportunities for working people and the poor throughout the world This version of a Green New Deal program is in fact entirely realistic in terms of its purely economic and technical features The real question is whether it is politically feasible Chomsky and Pollin examine how we can build the political force to make a global Green New Deal a reality

Robert Pollin warns against the worldwide slump degrowth could bring and calls instead for a single issue campaign 2 per cent of global GDP dedicated to the switch to renewable energy as the swiftest solution to the emissions crisis Nancy Fraser envisages an eco socialist exit from capitalism s multifold crises while Troy Vettese advocates eco austerity and half earth rewilding Lola Seaton draws out the strategic implications of these contested perspectives in a set of unavoidable green questions In the realm of contemporary politics Alyssa Battistoni writes on the dead end of COP diplomacy Cdric Durand asks whether energy shortages will derail the transition away from fossil fuels and Thomas Meaney compares Green New Deal proposals to the pinched reality of Biden s Inflation Reduction Act The world s major powers accept the likelihood of dangerous climate change yet seem incapable of averting it Can radical green models generate the social leverage needed to do so Or as Mike Davis puts it Who will build the Ark

Fuel Karen Pinkus, 2016-11-01 Fuel is an idiosyncratic speculative dictionary of fuels real and imagined historical and futuristic hopeless and utopian Drawing on literature film and scientific treatises most produced long before climate change was in circulation Fuel argues for a distinction between energy a system of power and fuel a substance which can be thought of as potentiality as it endeavors to undo the dream that we can simply switch to renewables and all will be golden From Air to Zyklon B entries in this unusual dictionary include Algae Clathrates Dilithium Fleece Goats Theology Whale Oil and many many more The tone of the entries ranges as widely as the topics from historical anecdotes the Ford Fiesta boozemobile to eccentric readings of the classics of energy lit Germinal and Oil from literary observations a high octane Odyssey to excursions into literary theory The dictionary draws from an eccentric canon including works by Jules Verne George Eliot's Silas Marner Paolo Bacigalupi's Windup Girl and the Tom Cruise vehicle Oblivion among others A message from this ambitious project is that energy can be understood as a heterogeneous set of self mystifying systems or machines that block access to thought as they fascinate us Fuels emerge as more primal elements that the audience can grasp at various points along the way to consumption combustion This dictionary can help scramble our thinking about fuel not in order to demonize energy and not in order to create a new hierarchy in

which certain renewables take over from fossil fuels but instead to open up potential ways of interacting with real and imaginary substances by wrenching them out of narrative and placing them into an idiosyncratic dictionary to be applied by readers into new narratives

The Simple Physics of Energy Use Peter Rez, 2017-09-29 As a society we use energy for climate control and lighting in buildings moving people and goods from one place to another and making things Our standard of living depends on transforming energy locked up in fossil fuels atomic nuclei or provided free of charge by the sun and wind into a form that we can use This book uses simple classical physics mechanics thermodynamics and electromagnetism to quantitatively review sources of energy and how we use them It addresses key questions such as Can renewables such as solar and wind take over from fossil fuels How much will their use reduce CO2 emissions To see what is important numbers are used to estimate how big or small things are but the maths is kept at the level of simple algebra and trigonometry The aim is to give an overview of the big picture to only worry about what really makes a difference There's also growing concern that CO2 emissions from burning fossil fuels will change climate irreversibly in harmful ways
