

# CHRONY BETA-MASTER

**CAUTION:** Do not leave your Shooting Chrony® in a car on a warm to hot day. The liquid in the LCD may change to some degree (because of heat build-up) and fail, showing [8888].

**NOTE:** At any time you can leave the unit alone for approximately 15 seconds and it will return to "ready to shoot mode."

## Setup:

### Step-1

- Ensure safe shooting backstop
- Make sure the battery has a min. of 7.5 VDC
- Place the Chrony so shots fired will 4" to 6" above the top of the photo-sensors (black boxes). 4" for open sights, 6" for scoped rifles

### Step-2

Minimum distance of Chrony from muzzle:

- Air gun & .22 rim fire – 3'
- Bow & Arrow – 4'
- Shot gun – 5'
- Small-calibre-centre fire – 8' (low velocity rounds)
- High-calibre-centre fire – 10' to 15' (the bigger blast, the longer distance)

### Step-3

- For indoor shooting ensure no fluorescent lights are used, & install only 6.5" rods as guides.
- For outdoor shooting, make sure nothing is between the Chrony and the sky (branches, roofs)
- On hazy, cloudy days install only the 6.5" wire rods as aiming guides

#### Indoor / "hazy weather" set-up:

- On clear, sunny days, common set-up would include installing 6.5" wire-rods into the sensor housings, followed by 9.25" rods, and use of all 6 diffusers pieces. Bench-rest shooters may opt. to only use the 9.25" rods, leaving out the centre section of the white diffusers for more reliable, accurate readings.

#### Common set-up:

#### Bench-rest set-up:

Leave out center diffuser

Neurotransmitters and Epilepsy Phillip C. Jobe, Hugh E. Laird II, 1987-11-30 The idea for this book has evolved from our desire to present a conceptual approach to the study of neurotransmitters in epilepsy Such an approach requires an understanding of the function of neurotransmitter systems in various experimental models of epilepsy Toward this goal we have included in this book chapters on neurotransmitter systems in nine different epilepsy models To complete the coverage of this topic there is a chapter on the role of selected neurotransmitters in the various types of human epilepsies In the final chapter the editors integrated the neurotransmitter data from the various epilepsy models into a matrix from which a better understanding of the function of these neurotransmitters in modulating epileptogenesis may be obtained The information found in this book is not the result of a symposium on this topic but rather a review of available information on neurotransmitters in each of the experimental models The evidence is presented by knowledgeable researchers using these models This approach gives a current broader and more thorough presentation of each of the topics We therefore feel that this is not just a glimpse at the subject matter but a panoramic view of the topic

Handbook of Quality of Life and Social Change Cornelia C.
