

## IDENTIFICATION

A brass name plate, as shown in Figure 5, is attached to the rear of the engine, showing the model symbol, type and serial number of the engine. Reading from left to right on the name plate, the first item is the model symbol, M-318A, which indicates that the engine is a Chrysler Marine Model M-318A series.

The next two letters code the engine output variation and final drive. These symbols are followed by a dash and then a letter denoting propeller shaft rotation. The letter "R" indicates a right hand propeller shaft rotation; the letter "L" indicates a left hand propeller shaft rotation. Propeller shaft rotation is defined as viewed from the stern looking towards the engine.

The next number on the name plate indicates the reduction ratio of the reverse gear, i.e., "10" = 1:1 or straight drive, "15" = 1.5:1, "25" = 2.5:1. When used with outdrives the same procedures are used.

This is followed by a dash and then the engine specification number. The engine serial number is below the model and specification number. In all events this information should be carefully noted and recorded and kept with the ship's papers to identify the engine, and always referred to in servicing the engine.
