Flexible Ridesharing Volker Handke,Helga Jonuschat,2012-12-14 Individual mobility is one of the most important needs of modern society and an important link between private public and economic life In contrast transport also entails severe environmental and social burdens foiling current efforts for sustainable development As the main source of CO2 emissions transport is a prominent driver for climate change and individual car traffic is responsible for nearly a third of the total energy consumption However we have to consider that many commuters feel indeed very dependent on their car Here ridesharing promises to contribute to environmental protection while still offering individual mobility Although ridesharing

options have been discussed since many years internet and smartphones provide completely new opportunities to find ridesharing partners today Thus this book deals with current efforts on implementing flexible internet and phone based ridesharing services With a main focus on the users perspective their demands and acceptance limits we aim to explore success factors for non profit but also commercial ridesharing concepts *Boating* ,1968-07 **The Right Sensory Mix** Diana Derval,2022-04-08 Many companies fail to acknowledge and analyze disparities observed among customers and simply put them down to culture or emotion New neuroendocrinological research proves that people are rational They just have a different biological perception of the same stimulus Their preferences behavior and decisions are strongly influenced by the hundreds of millions of sensors monitoring their body and brain People with more taste buds are for example sensitive to bitterness and are more likely to drink their coffee with sugar or milk or to drink tea This book helps product managers marketers and corporate decision makers understand and predict customers behavior and preferences It provides the tools to design the right sensory mix color shape depth taste smell texture and sound for each product and fine tune their positioning and range for every local market Using cases from different sectors the author shows that this approach delivers planet and people friendly innovations which have a higher chance of success in the market **The Software Encyclopedia** ,1986 **Hearings, Reports and Prints of the Senate Committee on Government Operations** United States. Leasure,2000 Route Choice: Wayfinding in Transport Networks P.H. Bovy,E. Stern,2012-12-06 With the ever increasing number of opportunities in every aspect of modern life making choices becomes part of our daily routine It is thus only natural that social scientists have started to study human choice behavior Early efforts focused on modeling aggregate choice patterns of home buyers shoppers travelers and others Later studies aiming to achieve more realistic results have concentrated on simulating disaggregate behavior The most recent approach in choice research is the so called Discrete Choice Modeling It is a front line area mainly in contemporary transportation geography and behavioral research It focuses on individuals decision making processes regarding the choice of destinations modes departure times and routes Considerable research has been done on identifying and quantifying the general rules governing

the individuals choice behavior but to the best of our knowledge there is no single book that solely deals with route choice. The study of travelers route choice in networks is primarily oriented towards gaining insight into their spatial choice behavior. How do people choose routes in a network? what do they know? what do they look for? which road characteristics play a role? On the basis of this information it is possible to design quantitative models aimed at predicting the use of routes dependent on the characteristics of the routes, those of the surrounding environment and those of the travelers. In this way traffic flows in the network can be calculated and the network performance can be evaluated.
