He has provided the academic world with a long needed bibliographical record of human endeavour in the field of the natural sciences. The travel narratives listed here encompass all aspects of the natural world in every part of the globe but are especially concerned with its fauna, flora and fossil remains. Such eyewitness accounts have always fascinated their readers but they were never written solely for entertainment. fragmentary though they often are, these narratives of travel and exploration are of immense importance for our scientific understanding of life on earth, providing us with a window on an ever changing and often vanishing natural world. Without such records of the past we could not track, document or understand the significance of changes that are so important for the study of zoogeography. With this book Troelstra gives us a superb overview of natural history travel narratives. The well over four thousand detailed entries, ranging over four centuries and all major western European languages, are drawn from a wide range of sources and include both printed books and periodical contributions. While no subject bibliography by a single author can attain absolute completeness, Troelstra's work is comprehensive to a truly remarkable degree. The entries are arranged alphabetically by author and chronologically by the year of first publication under the author's name. A brief biography with the scope and range of their work is given for each author; every title is set in context, the contents including illustrations are described, and all known editions and translations are cited. In addition, there is a geographical index that cross-refers between authors and the regions visited, and a full list of the bibliographical and biographical sources used in compiling the bibliography. *The Annals & Magazine of Natural History*, 1916 *Galapagos* Michael Hume Jackson, 1993 This book details the natural history of the plants and animals found in the Galapagos Islands. A list of the dominant plants according to vegetation zone is included. Of particular note is the discussion of the problems of colonisation by founding populations, biological evolution and ecology, and of the evolutionary processes bringing about species diversity. **How Life Increases Biodiversity** David Seaborg, 2021-09-09 This book argues that organisms and their interactions create and maximize biodiversity. The evidence for this autocatalytic hypothesis has been collated and integrated into this provocative argument. Natural selection favors the increase of biodiversity. Organisms can be causative agents contributing to major macroevolutionary transitions. Species tend to have a net positive effect on biodiversity. All species are ecosystem engineers. Mutualism and commensalism are common and fundamental, and these coevolved interspecific interactions frequently generate enormous increases in biodiversity. Competition generally does not decrease biodiversity and often leads to evolutionary innovation. Plants are ecosystem engineers that have made Earth more favorable to life and increased diversity in many ways. Herbivores and predators increase the diversity of the species they consume and are necessary for ecosystem stability. Decomposers are essential to ecosystem health. All these examples illustrate the focus of this book: that organisms and their interactions stimulate biodiversity and ecosystems maximize it. Key Features Describes a hypothesis that life itself

generates higher biodiversity Suggests a highly modified version of the established paradigm in population biology and evolution Asserts that all species are ecosystem engineers with a net positive effect on biodiversity and their ecosystems Suggests that mutualism and commensalism are the rule Presents a novel view likely to elicit deeper discussions of biodiversity Related Titles Dewdney A K Stochastic Communities A Mathematical Theory of Biodiversity ISBN 978 1 138 19702 2 Curry G B and C J Humphries eds Biodiversity Databases Techniques Politics and Applications ISBN 978 0 367 38916 1 Pullaiah T ed Global Biodiversity 4 Volume Set ISBN 978 1 77188 751 9 Galápagos John Kricher, Kevin Loughlin, 2022-11-29 A richly illustrated nature tour of Gal pagos now expanded thoroughly updated and with more than 650 color photographs Gal pagos is a comprehensive up to date and profusely illustrated natural history of this spectacular archipelago Offering much more information than identification guides the book provides detailed accounts and more than 650 color photographs of the islands habitats marine life reptiles birds mammals and plants making the book a virtual nature tour of Gal pagos Gal pagos experts John Kricher and Kevin Loughlin have thoroughly revised the original text bringing all the taxonomy up to date and adding a wealth of new information Individual chapters cover geology ecology human history Darwin s finches and how Darwin came to his theory of natural selection from his visit to the islands Gal pagos tortoises marine and land iguanas mammals seabirds landbirds marine life and conservation challenges and initiatives The concluding chapter covers each of the individual islands including landing sites unique plant and animal species and points of interest and serves as a wonderful guide for visitors as they move from island to island or plan a trip to Gal pagos With its combination of rich text and splendid photos Gal pagos is essential reading for the ecotraveler and nature enthusiast alike Now with more than 650 color photographs showing habitats geology marine life and all the commonly encountered reptiles birds mammals and plants Features a detailed island by island guide including landing sites and what visitors can expect Essential reading for the ecotraveler and nature enthusiast *Annals & Magazine of Natural History* ,1916 **Quill & Quire** ,1996 A Natural History of the Future Rob Dunn, 2021-11-09 An arresting vision of this relentless natural world New York Times Book Review A leading ecologist argues that if humankind is to survive on a fragile planet we must understand and obey its iron laws Our species has amassed unprecedented knowledge of nature which we have tried to use to seize control of life and bend the planet to our will In A Natural History of the Future biologist Rob Dunn argues that such efforts are futile We may see ourselves as life s overlords but we are instead at its mercy In the evolution of antibiotic resistance the power of natural selection to create biodiversity and even the surprising life of the London Underground Dunn finds laws of life that no human activity can annul When we create artificial islands of crops dump toxic waste or build communities we provide new materials for old laws to shape Life s future flourishing is not in question Ours is As ambitious as Edward Wilson s Sociobiology and as timely as Elizabeth Kolbert s The Sixth Extinction A Natural History of the Future sets a new standard for understanding the diversity and destiny of life itself The Galapagos Henry Nicholls, 2014-04-08

Charles Darwin called it a little world within itself Sailors referred to it as Las Encantadas the enchanted islands Lying in the eastern Pacific Ocean straddling the equator off the west coast of South America the Gal gos is the most pristine archipelago to be found anywhere in the tropics It is so remote so untouched that the act of wading ashore can make you feel like you are the first to do so Yet the Gal gos is far more than a wild paradise on earth it is one of the most important sites in the history of science Home to over 4 000 species native to its shores around 40 percent of them endemic the islands have often been called a laboratory of evolution The finches collected on the Gal gos inspired Darwin s revolutionary theory of natural selection In The Gal gos science writer Henry Nicholls offers a lively natural and human history of the archipelago charting its course from deserted wilderness to biological testing ground and global ecotourism hot spot Describing the island chain s fiery geological origins as well as our species long history of interaction with the islands he draws vivid portraits of the life forms found in the Gal gos capturing its awe inspiring landscapes understated flora and stunning wildlife Nicholls also reveals the immense challenges facing the islands which must continually balance conservation and ever encroaching development Beautifully weaving together natural history evolutionary theory and his own experience on the islands Nicholls shows that the story of the Gal gos is not merely an isolated concern but reflects the future of our species relationship with nature and the fate of our planet Natural History ,1923 **Encyclopedia of Evolutionary Biology** ,2016-04-14
