## Galileo Basic Manual:

The Essential Galileo John Gribbin, Mary Gribbin, 2014-04-01 Galileo Galilei 1564 1642 was the first scientist in the modern use of the term. Instead of relying on the works of Aristotle he actually carried out experiments to test theories. Legend has it that one of his experiments involved throwing weights off the Leaning Tower of Pisa. His astronomical observations with the telescope shattered the idea that the Earth was at the centre of the Universe and led to his trial for heresy. He had a great lust for life, three children by a woman he never married, a biting sarcasm with and the friendship of princes and in spite of his run in with Pope Urban VIII, cardinals. An introduction, afterword and clear chronological table place Galileo's work in the context of the development of scientific knowledge. Galileo's Muse Mark A. Peterson, 2011-10-17 Mark Peterson makes an extraordinary claim in this fascinating book focused around the life and thought of Galileo: it was the mathematics of Renaissance arts, not Renaissance sciences that became modern science. Painters, poets, musicians and architects brought about a scientific revolution that eluded the philosopher-scientists of the day.
