game development is the process of developing a video game The effort is undertaken by a developer ranging from a single person to an international team dispersed across the globe Development of traditional commercial PC and console games is normally funded by a publisher and can take several years to reach completion Indie games usually take less time and money and can be produced by individuals and smaller developers The independent game industry has been on the rise facilitated by the growth of accessible game development software such as Unity platform and Unreal Engine 1 and new online distribution systems such as Steam and Uplay as well as the mobile game market for Android and iOS devices The first video games developed in the 1960s were not usually commercialised They required mainframe computers to run and were not available to the general public Commercial game development began in the 70s with the advent of first generation video game consoles and early home computers like the Apple I At that time owing to low costs and low capabilities of computers a lone programmer could develop a full and complete game However in the late 80s and 90s ever increasing computer processing power and heightened expectations from gamers made it difficult for a single person to produce a mainstream console or PC game The average cost of producing a triple A video game slowly rose from US 1.4 million in 2000 to over 5 million in 2006 then to over 20 million by 2010 citation needed Mainstream commercial PC and console games are generally developed in phases first in pre production pitches prototypes and game design documents are written if the idea is approved

and the developer receives funding then full scale development begins The development of a complete game usually involves a team of 20 100 individuals with various responsibilities including designers artists programmers and testers
