Mark Frauenfelder, 2012-07-18 Why are so many kids and adults like you bored by science Simple you've had no real contact with it You might read about incredibly expensive scientific projects but your hands on experience is probably limited to the same tired experiments like baking soda and vinegar volcanoes Not any longer Make Magazine's Punk Science issue volume 31 shows you how you can become a real cutting edge amateur scientist Find out how high school and college students can get an introduction to modern biology research through affordable biotech labs provided by Otyp a small Michigan based biotechnology company And learn how a cooperative network of schools and research groups called PEER enables students to learn science by working on real projects with people in the field including the DECA Distributed Electronic Cosmic Ray Observatory that uses Android phones to generate a real time cosmic ray flux map of a large area This issue also shows you how to create these fascinating projects on your own RoboRoach Surgically modify a cockroach with a wireless electronic circuit so that you can control it to turn left or right by micro stimulating its antenna nerves Lord Kelvin's Thunderstorm a little known classic science experiment that generates high voltage lightning sparks by dripping water through metal rings An automatic Ball Toy Launcher for Dogs that will keep your pet entertained and exercised while you're away A True Mirror which shows what you look like to other people Pick up a copy of Make today and get involved with real science      Spooky Action at a Distance George Musser, 2015-11-03 Long listed for the 2016 PEN E O Wilson Literary Science Writing Award Delightfully readable Spooky Action at a Distance is a mind bending voyage to the frontiers of modern physics that will change the way we think about reality What is space It isn't a question that most of us normally ask Space is the venue of physics it's where things exist where they move and take shape Yet over the past few decades physicists have discovered a phenomenon that operates outside the confines of space and time nonlocality the ability of two particles to act in harmony no matter how far apart they may be It appears to be almost magical Einstein grappled with this oddity and couldn't come to terms with it describing it as spooky action at a distance More recently the mystery has deepened as other forms of nonlocality have been uncovered This strange occurrence which has direct connections to black holes particle collisions and even the workings of gravity holds the potential to undermine our most basic understandings of physical reality If space isn't what we thought it was then what is it In Spooky Action at a Distance George Musser sets out to answer that question offering a provocative exploration of nonlocality and a celebration of the scientists who are trying to explain it Musser guides us on an epic journey into the lives of experimental physicists observing particles acting in tandem astronomers finding galaxies that look statistically identical and cosmologists hoping to unravel the paradoxes surrounding the big bang He traces the often contentious debates over nonlocality through major discoveries and disruptions of the twentieth century and shows how scientists faced with the same undisputed experimental evidence develop wildly different explanations for that evidence Their conclusions challenge our understanding of not only space and time but also the origins of the universe and they

suggest a new grand unified theory of physics An important book that provides insight into key new developments in our understanding of the nature of space time and the universe It will repay careful study John Gribbin The Wall Street Journal An endlessly surprising foray into the current mother of physics many knotty mysteries the solving of which may unveil the weirdness of quantum particles black holes and the essential unity of nature Kirkus Reviews starred review
