Exponential Sums And Differential Equations Am 124:

D-modules: Local formal convolution of elementary formal meromorphic connections Robert Gelb, 2015

According to the classical theorem of Levelt Turrittin Malgrange and its refined version developed by Claude Sabbah any meromorphic connection over the field of formal Laurent series in one variable can be decomposed in a direct sum of so called elementary formal meromorphic connections Changing the perspective one can also study operations that can be carried out with such special differential modules There are already formulas for the tensor product or the local formal Fourier transform for example This thesis analyses the local formal convolution the multiplicative case as well as the additive case of two elementary formal meromorphic connections and how the convolution can itself be decomposed into a direct sum of elementary formal meromorphic connections again

Galois Theory of Linear Differential Equations Marius van der Put, Michael F. Singer, 2012-12-06 Linear differential equations form the central topic of this volume Galois theory being the unifying theme A large number of aspects are presented algebraic theory especially differential Galois theory formal theory classification algorithms to decide solvability in finite terms monodromy and Hilbert's 21st problem asymptotics and summability the inverse problem and linear differential equations in positive characteristic The appendices aim to help the reader with concepts used from algebraic geometry linear algebraic groups sheaves and tannakian categories that are used This volume will become a standard reference for all mathematicians in this area of mathematics including graduate students

Twisted L-Functions and Monodromy. (AM-150) Nicholas M. Katz, 2002-02-24 For hundreds of years the study of elliptic curves has played a central role in mathematics The past century in particular has seen huge progress in this study from Mordell's theorem in 1922 to the work of Wiles and Taylor Wiles in 1994 Nonetheless there remain many fundamental questions where we do not even know what sort of answers to expect This book explores two of them What is the average rank of elliptic curves and how does the rank vary in various kinds of families of elliptic curves Nicholas Katz answers these questions for families of big twists of elliptic curves in the function field case with a growing constant field The monodromy theoretic methods he develops turn out to apply still in the function field case equally well to families of big twists of objects of all sorts not just to elliptic curves The leisurely lucid introduction gives the reader a clear picture of what is known and what is unknown at present and situates the problems solved in this book within the broader context of the overall study of elliptic curves The book's technical core makes use of and explains various advanced topics ranging from recent results in finite group theory to the machinery of l -adic cohomology and monodromy Twisted L Functions and Monodromy is essential reading for anyone interested in number theory and algebraic geometry

Number Theory Ellen E. Eischen, Ling Long, Rachel Pries, Katherine E. Stange, 2016-09-26 Exploring the interplay between deep theory and intricate computation this volume is a compilation of research and survey papers in number theory written by members of the Women In Numbers WIN network principally by the collaborative research groups formed at Women In Numbers 3 a conference at the Banff International Research Station in Banff Alberta on April 21-25 2014 The papers span a wide range of research areas arithmetic geometry analytic number theory algebraic number theory and applications to coding and cryptography The WIN conference series began in 2008 with the aim of strengthening the research careers of female number theorists The series introduced a novel research mentorship model women at all career stages from graduate students to senior members of the community joined forces to work in focused research groups on cutting edge projects designed and led by experienced researchers The goals for Women In Numbers 3 were to establish ambitious new collaborations between women in number theory to train junior participants about topics of current importance and to continue to build a vibrant community of women in number theory Forty two women attended the WIN3 workshop including 15 senior and mid level faculty 15 junior faculty and postdocs and 12 graduate students *Applications of Random Matrices*

Doklady, 2002 *Elementary Differential Equations and Boundary Value Problems* William E. Boyce, Richard C. DiPrima, Douglas B. Meade, 2021-10-19 Elementary Differential Equations and Boundary Value Problems 12th Edition is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite theoretical sometimes intensely practical and often somewhere in between In this revision new author Douglas Meade focuses on developing students conceptual understanding with new concept questions and worksheets for each chapter Meade builds upon Boyce and DiPrima's work to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications The main prerequisite for engaging with the program is a working knowledge

of calculus gained from a normal two or three semester course sequence or its equivalent Some familiarity with matrices will also be helpful in the chapters on systems of differential equations

Research in Progress , Exponential Sums and Differential Equations Nicholas M. Katz, 2016-03-02 This book is concerned with two areas of mathematics at first sight disjoint and with some of the analogies and interactions between them These areas are the theory of linear differential equations in one complex variable with polynomial coefficients and the theory of one parameter families of exponential sums over finite fields After reviewing some results from representation theory the book discusses results about differential equations and their differential galois groups G and one parameter families of exponential sums and their geometric monodromy groups G The final part of the book is devoted to comparison theorems relating G and G of suitably corresponding situations which provide a systematic explanation of the remarkable coincidences found by hand in the hypergeometric case

Infinite Families of Exact Sums of Squares Formulas, Jacobi Elliptic Functions, Continued Fractions, and Schur Functions Stephen C. Milne, 2013-11-27 The problem of representing an integer as a sum of squares of integers is one of the oldest and most significant in mathematics It goes back at least 2000 years to Diophantus and continues more recently with the works of Fermat Euler Lagrange Jacobi Glaisher Ramanujan Hardy Mordell Andrews and others Jacobi's elliptic function approach dates from his epic Fundamenta Nova of 1829 Here the author employs his combinatorial elliptic function methods to derive many infinite families of explicit exact formulas

involving either squares or triangular numbers two of which generalize Jacobi's 1829 4 and 8 squares identities to $4n^2$ or $4n$ $n+1$ squares respectively without using cusp forms such as those of Glaisher or Ramanujan for 16 and 24 squares These results depend upon new expansions for powers of various products of classical theta functions This is the first time that infinite families of non trivial exact explicit formulas for sums of squares have been found The author derives his formulas by utilizing combinatorics to combine a variety of methods and observations from the theory of Jacobi elliptic functions continued fractions Hankel or Turanian determinants Lie algebras Schur functions and multiple basic hypergeometric series related to the classical groups His results in Theorem 5.19 generalize to separate infinite families each of the 21 of Jacobi's explicitly stated degree 2, 4, 6, 8 Lambert series expansions of classical theta functions in sections 40-42 of the *Fundamental Nova* The author also uses a special case of his methods to give a derivation proof of the two Kac and Wakimoto 1994 conjectured identities concerning representations of a positive integer by sums of $4n^2$ or $4n$ $n+1$ triangular numbers respectively These conjectures arose in the study of Lie algebras and have also recently been proved by Zagier using modular forms George Andrews says in a preface of this book This impressive work will undoubtedly spur others both in elliptic functions and in modular forms to build on these wonderful discoveries Audience This research monograph on sums of squares is distinguished by its diversity of methods and extensive bibliography It contains both detailed proofs and numerous explicit examples of the theory This readable work will appeal to both students and researchers in number theory combinatorics special functions classical analysis approximation theory and mathematical physics

Mathematical Reviews, 2005 Combinatorial Methods in Topology and Algebra Bruno Benedetti, Emanuele Delucchi, Luca Moci, 2015-10-31 Combinatorics plays a prominent role in contemporary mathematics due to the vibrant development it has experienced in the last two decades and its many interactions with other subjects This book arises from the INdAM conference CoMeTA 2013 Combinatorial Methods in Topology and Algebra which was held in Cortona in September 2013 The event brought together emerging and leading researchers at the crossroads of Combinatorics Topology and Algebra with a particular focus on new trends in subjects such as hyperplane arrangements discrete geometry and combinatorial topology polytope theory and triangulations of manifolds combinatorial algebraic geometry and commutative algebra algebraic combinatorics and combinatorial representation theory The book is divided into two parts The first expands on the topics discussed at the conference by providing additional background and explanations while the second presents original contributions on new trends in the topics addressed by the conference *Annales de l'Institut Fourier* Institut Fourier, 1949

Lectures on Ergodic Theory and Pesin Theory on Compact Manifolds Mark Pollicott, 1993-02-04 These lecture notes provide a unique introduction to Pesin theory and its applications **Applications of Categories in Computer Science** M. P. Fourman, P. T. Johnstone, A. M. Pitts, 1992-06-26 Category theory and related topics of mathematics have been increasingly applied to computer science in recent years This book contains selected papers from the London Mathematical

Society Symposium on the subject which was held at the University of Durham Participants at the conference were leading computer scientists and mathematicians working in the area and this volume reflects the excitement and importance of the meeting All the papers have been refereed and represent some of the most important and current ideas Hence this book will be essential to mathematicians and computer scientists working in the applications of category theory
