**Building in Hot and Humid Regions** Napoleon Enteria, Hazim Awbi, Mat Santamouris, 2019-04-26. This book presents an in-depth analysis covering climatic and weather conditions, house and building development history, construction methods and technologies, and environmental conditions. It provides relevant house and building information and highlights recent advances in hot and humid regions as well as developments in other regions that are relevant to hot and humid climates. The countries in hot and humid regions, which include the tropical countries, the Middle Eastern countries around the Mediterranean, and many countries of Central Asia and Africa, are home to some of the most challenging conditions in the world in terms of house and building design and construction and in terms of maintaining indoor thermal comfort and air quality in an energy-efficient way. The book's respective chapters, prepared by expert contributors, cover essential concepts, designs, and construction methodologies for houses and commercial buildings. As such, the book offers a valuable resource for undergraduate and graduate students in architecture and engineering, house and building designers and building sciences researchers, building contractors, manufacturers and distributors of building equipment and devices, and government policymakers and legislators will also benefit from the information provided in this book.

***The Built Environment*** Wendy R. McClure, Tom J. Bartuska, 2011-09-09. This book takes a sweeping view of the ways we build things, beginning at the scale of products and interiors to that of regions and global systems. In doing so, it answers questions on how we effect and are affected by our environment and explores how components of what we make from products, buildings, and cities are interrelated and why designers and planners must consider these connections.

**Scientific and Technical Aerospace Reports**, 1995. **Examining the Environmental Impacts of Materials and Buildings** Brownell, Blaine Erickson, 2020-02-28. Fundamental environmental challenges such as climate change, resource depletion, and pollution are still widely relevant in today's world. Many of these problems have been associated with the architecture, engineering, and construction industries due to the level of resources used in these professions. In recent years, many manufacturers in these fields have expressed the motivation to make necessary changes that would be beneficial to the environment. Despite this progress, there remains a lack of research and assessment on the methods to achieve environmental stability within these architectural fields. *Examining the Environmental Impacts of Materials and Buildings* provides emerging research exploring the theoretical and practical aspects of ecological performance within modern building design and materials-based construction. Featuring coverage on a broad range of topics such as life cycle assessment, material flows analysis, and
