Weaving Self-Evidence Claude Rosental, 2021-03-09 The development of theorems in logic is generally thought to be a solitary and purely cerebral activity and therefore unobservable by sociologists. In Weaving Self Evidence French sociologist Claude Rosental challenges this notion by tracing the history of one well known recent example in the field of artificial intelligence a theorem on the foundations of fuzzy logic. Rosental's analyses disclose the inherently social nature of the process by which propositions in logic are produced disseminated and established as truths. Rosental describes the different phases of the emergence of the theorem on fuzzy logic from its earliest drafts through its publication and diffusion discussion and reformulation and eventual acceptance by the scientific community. Through observations made at major universities and scholarly conferences and in electronic forums he looks at the ways students are trained in symbolic manipulations and formal languages and examines how researchers work interact and debate emerging new ideas. By carefully analyzing the concrete mechanisms that lead to the collective development and corroboration of proofs Rosental shows how a logical discovery and its recognition within the scholarly community are by no means the product of any one individual working in isolation but rather a social process that can be observed and studied. Weaving Self Evidence will

interest students and researchers in sociology and the history and philosophy of science and technology and anyone curious about how scientists work **Mapping Biology Knowledge** K. Fisher, J.H. Wandersee, D.E. Moody, 2006-04-11 Mapping Biology Knowledge addresses two key topics in the context of biology promoting meaningful learning and knowledge mapping as a strategy for achieving this goal Meaning making and meaning building are examined from multiple perspectives throughout the book In many biology courses students become so mired in detail that they fail to grasp the big picture Various strategies are proposed for helping instructors focus on the big picture using the need to know principle to decide the level of detail students must have in a given situation The metacognitive tools described here serve as support systems for the mind creating an arena in which learners can operate on ideas They include concept maps cluster maps webs semantic networks and conceptual graphs These tools compared and contrasted in this book are also useful for building and assessing students content and cognitive skills The expanding role of computers in mapping biology knowledge is also explored Capitalizing on Investments in Science and Technology National Academy of Engineering, National Academy of Sciences, Institute of Medicine, National Academy of Sciences, National Academy of Engineering, Institute of Medicine, Committee on Science, Engineering, and Public Policy, 1999-04-18 Although the United States is currently capitalizing on its investment in science and technology effectively there remains much room for improvement This volume identifies the ingredients for success in capitalizing on such investments to produce national benefits assesses current U S performance and identifies future challenges The book cites specific examples and examines several cross cutting issues It explores the possibility that the national research portfolio is losing diversity as a result of less long term research in critical fields such as networking and materials It also examines the implications of imbalances in the supply of and demand for science and engineering talent in emerging interdisciplinary fields such as bioinformatics Capitalizing on Investments in Science and Technology Committee on Science, Engineering, and Public Policy, National Academy of Sciences, National Academy of Engineering, Institute of Medicine, Institute of Medicine, National Academy of Sciences, National Academy of Engineering, 1999-04-01 Although the United States is currently capitalizing on its investment in science and technology effectively there remains much room for improvement This volume identifies the ingredients for success in capitalizing on such investments to produce national benefits assesses current U S performance and identifies future challenges The book cites specific examples and examines several cross cutting issues It explores the possibility that the national research portfolio is losing diversity as a result of less long term research in critical fields such as networking and materials It also examines the implications of imbalances in the supply of and demand for science and engineering talent in emerging interdisciplinary fields such as bioinformatics **The SAGE Handbook of Grounded Theory** Antony Bryant, Kathy Charmaz, 2010-02-11 This Handbook gives a comprehensive overview of the theory and practice of grounded theory taking into account the many attempts to revise and refine Glaser and Strauss original formulation **European Integration and**
