Renewable resources are rapidly gaining importance as alternative raw materials for industrial production Supply planning with agricultural raw materials poses several challenges to processors These challenges include seasonal availability uncertain harvest quality and quantity as well as uncertain commodity market prices In this work decision support based on stochastic programming is developed to optimize supply planning of processors of agricultural raw materials given industrial requirements for material use The approach depicts uncertain parameter values with probability distributions and maximizes the expected profit Two examples are used to illustrate possible applications supply planning for a processor of linseed and for a seed company As stochastic programs can be adapted quickly this approach can be applied to other supply planning decisions in bio based supply chains   Human Interface and the Management of Information: Information, Knowledge and Interaction Design Sakae Yamamoto,2017-07-03 The two volume set LNCS 10273 and 10274 constitutes the refereed proceedings of the thematic track on Human Interface and the Management of Information held as part of the 19th HCI International 2017 in Vancouver BC Canada in July 2017 HCII 2017 received a total of 4340 submissions of which 1228 papers were accepted for publication after a careful reviewing process The 102 papers presented in these volumes were organized in topical sections as follows Part I Visualization Methods and Tools Information and Interaction Design Knowledge and Service Management Multimodal and Embodied Interaction Part II Information and Learning Information in Virtual and Augmented Reality Recommender and Decision Support Systems Intelligent Systems Supporting Collaboration and User Communities Case Studies   **Handbook of Research on Industrial Informatics and Manufacturing Intelligence: Innovations and Solutions** Khan, Mohammad Ayoub,Ansari, Abdul Quaiyum,2012-03-31 This book is the best source for the most current relevant cutting edge research in the field of industrial informatics focusing on different methodologies of information technologies to enhance industrial fabrication intelligence and manufacturing processes Provided by publisher   **CANCOM 2001 Proceedings of the 3rd Canadian International Conference on Composites** S.V. for an economist for a government for a statistician for a mathematician or for any socio economic plan Several Decision Methods have been adopted to decide who would be considered poor or who would not For examples i Absolute and Relative Poverty Line Method ii Uni dimension poverty Method iii Income Expenditure Method iv Head Count Ratio HCR v Income Gap Ratio IGR vi Poverty Gap Ratio PGR vii Advance Measure Method Foster Greer Thorbecke Measure Sen Shorrocks Thon measure SST and Sen Index viii Multi dimensional Poverty Approach i Counting Multi dimensional Poverty ii Multi dimensional Poverty Index MPI and iii Capability Approach These above mentioned methods were used at the global level Identification of poor and non poor in India is done based on Uni dimensional model that is to say Income consumption and expenditure model using following experts committee reports i Dandekar and Rath ii Y K Alagh iii Lakdawala iii Suresh Tendulkar Committee iv C Rangarajan Committee Modified Mixed Reference Period MMRP Poverty Line Basket PLB and Socio Economic and Caste Census SECC 2011 BPL Identification in 2015 Nevertheless every state in India is free to set its own standard of method to scale out the poor The state of Bihar adopted the method of A Score Based Ranking Methodology to identify the poor In Mathematical Modelling context all the above mentioned methods of making decisions fall under Crisp Decision Approach based on Aristotelian logic and Crisp Sets In response to this method of decision making approach fuzzy decision making approach was suggested as a better alternative to the process of poverty measurement method Andrea Cerioli and Sergio Zani were the first one to apply fuzzy logic to poverty assessment in the year 1990 Later Chiappero Martinetti and Qizilbash added the intrinsic vagueness of being poor by using so called membership function for the identification of the poor As the research continued further some more methods were addressed such as Totally Fuzzy TF Totally Fuzzy and Relative TFR Integrated Fuzzy Approach Multidimensional and Longitudinal to apply to identify and aggregate the poor Key Concepts and Techniques This book further develops and introduces a new approach suggesting Multi Criteria Fuzzy Decision making Tools and Fuzzy Set Theory to capture the extent of poverty of households accommodating both the quantitative and qualitative factors such as Roti Food Kapda Clothing Makaan Housing Kaam Job and Samman Social Status and their fourteen respective sub criteria The fuzzification process is carried out by using Pentagonal Fuzzy Numbers PFNs and by introducing Stratified Fuzzy Analytical Hierarchy Process SFAHP Fuzzy poverty categorization is carried out by introducing Fuzzy Sieve Technique FST The judgment and scaling of the criteria and sub criteria are done by adopting participative decision making method interview method based on questionnaires Stratified Fuzzy Analytical Hierarchy Process SFAHP categorizes the group of the poor into five subgroups such as i very poor ii almost very poor iii poor iv rather poor and v non poor Our fuzzy tools and methods are applied to the case study in Nalanda District Bihar India The book also highlights the comparative studies between three models such as Analytical Hierarchy Process AHP Fuzzy Analytical Hierarchy Process FAHP and Stratified Fuzzy Analytical Hierarchy Process SFAHP The final results justify that Stratified Fuzzy Analytical Hierarchy Process SFAHP gives better results in identifying the Poverty Status Special

Features Computer Algorithmic approach via MATLAB Programme for 5 X 5 Matrix is given to calculate the fuzzy centre value by using Matlab m file which will minimize the time in carrying out the fuzzification and normalization process to measure poverty status At the end the author shall ever be grateful to the inquisitive researchers and socio economic planners for their valuable suggestions for further improvement of this book DR RAJ KUMAR St Xavier s College of Management and Technology Patna Digha Ashiyan Road 11 Affliated to AKU Patna Bihar India **ECIME 2014 Proceedings of the 8th European Conference on IS Management and Evaluation** Steven de Haes,2014 **Agent-based Modeling and Simulation in Archaeology** Gabriel Wurzer,Kerstin Kowarik,Hans Reschreiter,2014-11-08 Archaeology has been historically reluctant to embrace the subject of agent based simulation since it was seen as being used to re enact and visualize possible scenarios for a wider generally non scientific audience based on scarce and fuzzy data Furthermore modeling in exact terms and programming as a means for producing agent based simulations were simply beyond the field of the social sciences This situation has changed quite drastically with the advent of the internet age Data it seems is now ubiquitous Researchers have switched from simply collecting data to filtering selecting and deriving insights in a cybernetic manner Agent based simulation is one of the tools used to glean information from highly complex excavation sites according to formalized models capturing essential properties in a highly abstract and yet spatial manner As such the goal of this book is to present an overview of techniques used and work conducted in that field drawing on the experience of practitioners **Proceedings of the 2013 International Conference on Electrical and Information Technologies for Rail Transportation (EITRT2013)-Volume II** Limin Jia,Zhigang Liu,Yong Qin,Minghua Zhao,Lijun Diao,2014-07-08 Proceedings of the 2013 International Conference on Electrical and Information Technologies for Rail Transportation EITRT2013 collects the latest research in this field including a wealth of state of the art research theories and applications in intelligent computing information processing communication technology automatic control etc The objective of the proceedings is to provide a major interdisciplinary forum for researchers engineers academics and industrial professionals to present the most innovative research on and developments in the field of rail transportation electrical and information technologies Contributing authors from academia industry and the government also offer inside views of new interdisciplinary solutions Limin Jia is a professor at Beijing Jiaotong University and Chief Scientist at the State Key Lab of Rail Traffic Control and Safety
