

A high-angle photograph of a man in a dark blue pinstripe suit sitting at a wooden table. He is looking down at a fan of playing cards in his right hand. A glass of amber liquid, likely whiskey, sits on the table to his right. His left hand is resting on the table, holding a small pile of coins. The scene is dimly lit, creating a somber and focused atmosphere.

In the Pursuit

of Winning Masood Zangeneh, Alex Blaszczynski, Nigel Turner, 2007-11-25 Gambling is an underrecognized problem from both a clinical and a public health point of view. It is not uncommon for an adolescent or adult to participate in one form of gambling or another on a regular basis, be it the lottery, card playing for money, sports wagering or gambling on electronic gaming devices. Nor is it uncommon for such participation to reach excessive or destructive proportions with negative effects on the individual's psychological, social, economic and family life. The results of the National Research Council's 2000 review of empirical studies suggest that 85% of adolescents report having gambled during their lifetime with 73% of adolescents reporting having gambled in the past year. Despite gains in knowledge concerning the correlates and risk factors associated with severe gambling problems among youth during the past ten years, a general lack of public and parental awareness exists. This raises serious mental health and public policy concerns. Written from an international perspective, this book covers gambling research and interventions in the following categories: role of helpline services, a Jungian transpersonal approach to treatment, cognitive therapy for problem gambling, pharmacological interventions for problem gambling, desensitization, biofeedback as treatment for problem gambling, binge gambling, pathological gambling, past and contemporary aboriginal peoples' experiences with gambling, problem gambling counselor certification, measurement of outcomes in problem gambling, treatment overview of teen gambling, related issues from leading researchers.

Overcoming Pathological Gambling Robert Ladouceur, Stella Lachance, 2006-12-14 As gambling becomes more prevalent and more accessible in our society, pathological gambling is growing as a serious problem. In most instances, excessive gambling negatively affects a person's home, social and professional life, as well as leads to serious financial trouble. In repeated trials, cognitive behavioral therapy has proven an extremely effective treatment for this problem. Written by the developers of an empirically supported CBT program for the treatment of pathological gambling, this guide includes all the information and materials necessary to implement successful treatment. Most pathological gamblers exhibit misconceptions or erroneous beliefs about the nature of gambling, believing they can beat the system. One of the central points of focus of this treatment is to help clients correct these beliefs and understand the true nature of games of chance. The authors provide step-by-step instructions for clinicians to help clients understand all of the facets of their problem. In addition to correcting erroneous beliefs about gambling, this program teaches problem-solving skills, self-assessment techniques and trigger recognition and avoidance. Designed to be used in conjunction with the corresponding workbook, this guide provides results not only in supervised therapy but in long-term relapse prevention as well.
