**Exploring Mathematics With Integrated Spreadsheets In Teacher Education** Sergei Abramovich, 2015-07-30 The goal of the book is to technologically enhance the preparation of mathematics schoolteachers using an electronic spreadsheet integrated with Maple and Wolfram Alpha digital tools capable of sophisticated symbolic computations The content of the book is a combination of mathematical ideas and concepts associated with pre college problem solving curriculum and their extensions into more advanced mathematical topics The book provides prospective and practicing teachers with a foundation for developing a deep understanding of many concepts fundamental to the teaching of school mathematics It also provides the teachers with a technical expertise in designing spreadsheet based computational environments Consistent with the current worldwide guidelines for technology enhanced teacher preparation the book emphasizes the integration of context mathematics and technology as a method for teaching mathematics Throughout the book a number of mathematics education documents developed around the world Australia Canada England Japan Singapore United States are reviewed as appropriate *Towards Deep Understanding Of Elementary School Mathematics: A Brief Companion For Teacher Educators And Others* Sergei Abramovich, 2022-07-07

The book is intended to serve as a brief companion for mathematical educators of elementary teacher candidates who learn mathematics within a college of education both at the undergraduate and graduate levels Being informed by mathematics teaching and learning standards of the United States Australia Canada Chile England Japan Korea Singapore and South Africa the book can be used internationally The teaching methods emphasize the power of visualization the use of physical materials and support of computer technology including spreadsheet Wolfram Alpha and the Geometer's Sketchpad The basic ideas include the development of the concepts of number base ten system problem solving and posing the emergence of fractions in the context of simple real life activities requiring the extension of whole number arithmetic decimals percent ratio geoboard geometry elements of combinatorics probability and data analysis The book includes historical aspects of elementary school mathematics For example readers would be interested to know that two sided counters stem from the binary system with its genesis in the 1st millennium BC China of which Leibnitz 17th century was one of the first notable proponents The genesis of the base ten arithmetic is in the Egyptian mathematics of the 4th millennium BC enriched with the positional notation with the advent of Hindu Arabic numerals in the 12th century Europe

*Topics in Mathematics For Elementary Teachers* Sergei Abramovich, 2024-01-01 This is the second revised edition of the book published in 2010 under the same title It reflects the author's experience teaching a graduate level mathematics content course for elementary teacher candidates at SUNY Potsdam since 2003 The book addresses a number of recommendations of the Conference Board of the Mathematical Sciences for the preparation of teachers demonstrating how abstract mathematical concepts can be motivated by concrete activities and the use of technology Such approach to school mathematics makes it easier for teachers to grasp the meaning of generalization formal proof and the creation of an

increasing number of concepts on higher levels of abstraction The book's computer enhanced pedagogy and its strong experiential component enabled by the use of manipulative materials have the potential to reduce mathematics anxiety among teachers and help them develop confidence in teaching the subject matter through modeling and problem solving Classroom observations of teachers learning mathematics as a combination of theory and experiment confirm that this approach elevates one's mathematical understanding to a higher ground Most of the chapters are motivated by a problem typically found in the elementary mathematics curricula and or standards either National or New York State the context in which the author prepare teachers By exploring traditional problems in depth teachers can uncover fundamental mathematical concepts and ideas hidden within a seemingly mundane task The need to have experience in going beyond traditional expectations for learning is due to the constructivist orientation of contemporary mathematics pedagogy that encourages students to ask questions about mathematics they study Each chapter except the last one includes an activity set that can be used for the development of the variety of assignments for teachers Digital tools used in the book include spreadsheets Wolfram Alpha GeoGebra Kid Pix Studio Deluxe and Graphing Calculator Pacific Tech

**Fostering Collateral Creativity in School Mathematics** Sergei Abramovich, Viktor Freiman, 2023-10-03 This book explores the topic of using technology both physical and digital to motivate creative mathematical thinking among students who are not considered mathematically advanced The book reflects the authors experience of teaching mathematics to Canadian and American teacher candidates and supervising several field based activities by the candidates It consists of eight chapters and an Appendix which includes details of constructing computational learning environments Specifically the book demonstrates how the appropriate use of technology in the teaching of mathematics can create conditions for the emergence of what may be called collateral creativity a notion similar to Dewey's notion of collateral learning Just as collateral learning does not result from the immediate goal of the traditional curriculum collateral creativity does not result from the immediate goal of traditional problem solving Rather mathematical creativity emerges as a collateral outcome of thinking afforded by the use of technology Furthermore collateral creativity is an educative outcome of one's learning experience with pedagogy that motivates students to ask questions about computer generated or tactile derived information and assists them in finding answers to their own or the teacher's questions This book intends to provide guidance to teachers for fostering collateral creativity in their classrooms

**Integrating Computers And Problem Posing In Mathematics Teacher Education** Sergei Abramovich, 2018-09-17 The book is written to share ideas stemming from technology rich K 12 mathematics education courses taught by the author to American and Canadian teacher candidates over the past two decades It includes examples of problems posed by the teacher candidates using computers These examples are analyzed through the lenses of the theory proposed in the book Also the book includes examples of computer enabled formulation as well as reformulation of rather advanced problems associated with the pre digital era problem solving curriculum The goal of the problem

reformulation is at least two fold to make curriculum materials compatible with the modern day emphasis on democratizing mathematics education and to find the right balance between positive and negative affordances of technology The book focuses on the use of spreadsheets Wolfram Alpha Maple and The Graphing Calculator also known as NuCalc in problem posing It can be used by pre service and in service teachers interested in K 12 mathematics curriculum development in the digital era as well as by those studying mathematics education from a theoretical perspective
