**Fuzzy Stochastic Optimization** Shuming Wang, Junzo Watada, 2012-03-20 In 2014 winner of Outstanding Book Award by The Japan Society for Fuzzy Theory and Intelligent Informatics Covering in detail both theoretical and practical perspectives this book is a self contained and systematic depiction of current fuzzy stochastic optimization that deploys the fuzzy random variable as a core mathematical tool to model the integrated fuzzy random uncertainty It proceeds in an orderly fashion from the requisite theoretical aspects of the fuzzy random variable to fuzzy stochastic optimization models and their real life case studies The volume reflects the fact that randomness and fuzziness or vagueness are two major sources of uncertainty in the real world with significant implications in a number of settings In industrial engineering management and economics the chances are high that decision makers will be confronted with information that is simultaneously probabilistically uncertain and fuzzily imprecise and optimization in the form of a decision must be made in an environment that is doubly uncertain characterized by a co occurrence of randomness and fuzziness This book begins by outlining the history and development of the fuzzy random variable before detailing numerous optimization models and applications that include the design of system controls for a dam *Fuzzy Stochastic Optimization* Springer, 2012-03-21

Intelligent Decision Technologies 2017 Ireneusz Czarnecki, Robert J. Howlett, Lakhmi C. Jain, 2017-05-24 The volume presents a collection of peer reviewed articles from the 9th KES International Conference on Intelligent Decision Technologies KES IDT 17 held in Vilamoura Algarve Portugal on 21-23 June 2017 The conference addressed critical areas of computer science as well as promoting knowledge transfer and the generation of new ideas in the field of intelligent decision making project management and data analysis The range of topics addressed includes methods of classification prediction data analysis decision support modeling social media and many more in such diverse areas as finance linguistics management and transportation *Linear and Multiobjective Programming with Fuzzy Stochastic Extensions* Masatoshi Sakawa, Hitoshi Yano, Ichiro Nishizaki, 2013-11-29 Although several books or monographs on multiobjective optimization under uncertainty have been published there seems to be no book which starts with an introductory chapter of linear programming and is designed to incorporate both fuzziness and randomness into multiobjective programming in a unified way In this book five major topics linear programming multiobjective programming fuzzy programming stochastic programming and fuzzy stochastic programming are presented in a comprehensive manner Especially the last four topics together comprise the main characteristics of this book and special stress is placed on interactive decision making aspects of multiobjective programming for human centered systems in most realistic situations under fuzziness and or randomness Organization of each chapter is briefly summarized as follows Chapter 2 is a concise and condensed description of the theory of linear programming and its algorithms Chapter 3 discusses fundamental notions and methods of multiobjective linear programming and concludes with interactive multiobjective linear programming In Chapter 4 starting with clear explanations

of fuzzy linear programming and fuzzy multiobjective linear programming interactive fuzzy multiobjective linear programming is presented Chapter 5 gives detailed explanations of fundamental notions and methods of stochastic programming including two stage programming and chance constrained programming Chapter 6 develops several interactive fuzzy programming approaches to multiobjective stochastic programming problems Applications to purchase and transportation planning for food retailing are considered in Chapter 7 The book is self contained because of the three appendices and answers to problems Appendix A contains a brief summary of the topics from linear algebra Pertinent results from nonlinear programming are summarized in Appendix B Appendix C is a clear explanation of the Excel Solver one of the easiest ways to solve optimization problems through the use of simple examples of linear and nonlinear programming

**A Course in Mathematical and Statistical Ecology** Anil Gore,S.A. Paranjpe,2013-04-17 As the world enters the new millennium mankind faces a series of new problems many of them created by man himself These include overpopulation air and water pollution global warming accumulation of greenhouse gases damage to the ozone layer and loss of biodiversity Perhaps these problems were around even earlier in an incipient stage but they have now assumed global proportions and are uppermost in the minds of all A natural consequence is enhanced interest in sciences connected with these problems Ecology is a field that is immensely useful in understanding

many of them In the seventies nature conservation became a concern of wide sections of society well beyond the small group of expert ecologists Species extinction and depletion of biological resources were seen as major threats to human welfare It was therefore natural for scientists from different disciplines to seek reasons behind these developments We were no exceptions and when opportunity to interact with ecologists as statistical consultants came we found ourselves reading more and more of ecology and evolutionary biology Several years ago we proposed starting of an elective one semester course on statistical ecology for graduate students of statistics of Pune University

**Comparative Statistical Inference** Vic Barnett, 1999-08-03 This fully updated and revised third edition presents a wide ranging balanced account of the fundamental issues across the full spectrum of inference and decision making Much has happened in this field since the second edition was published for example Bayesian inferential procedures have not only gained acceptance but are often the preferred methodology This book will be welcomed by both the student and practising statistician wishing to study at a fairly elementary level the basic conceptual and interpretative distinctions between the different approaches how they interrelate what assumptions they are based on and the practical implications of such distinctions As in earlier editions the material is set in a historical context to more powerfully illustrate the ideas and concepts Includes fully updated and revised material from the successful second edition Recent changes in emphasis principle and methodology are carefully explained and evaluated Discusses all recent major developments Particular attention is given to the nature and importance of basic concepts probability utility likelihood etc Includes extensive references and bibliography Written by a well known and respected author the essence of this successful book remains unchanged providing the reader with a thorough explanation of the many approaches to inference and decision making

**An Economic Theory of Cities** Wei-Bin Zhang, 2012-12-06 Over more than two centuries the development of economic theory has created a wide array of different concepts theories and insights My recent books Capital and Knowledge Zhang 1999 and A Theory of International Trade Zhang 2000 show how separate economic theories such as the Marxian economics the Keynesian economics the general

equilibrium theory the neoclassical growth theory and the neoclassical trade theory can be examined within a single theoretical framework This book is to further expand the framework proposed in the previous studies This book is a part of my economic theory with endogenous population capital knowledge preferences sexual division of labor and consumption institutions economic structures and exchange values over time and space Zhang 1996a As an extension of the Capital and Knowledge which is focused on the dynamics of national economies this book is to construct a theory of urban economies We are concerned with dynamic relations between division of labor division of consumption and determination of prices structure over space We examine dynamic interdependence between capital accumulation knowledge creation and utilization economic growth price structures and urban pattern formation under free competition The theory is constructed on the basis of a few concepts within a compact framework The comparative advantage of our theory is that in providing rich insights into complex spatial economies it uses only a few concepts and simplified functional forms and accepts a few assumptions about behavior of consumers producers and institutional structures

Criteria Decision Making Under Uncertainty considers the more specialized but crucial context of uncertain choice involving tradeoffs between competing criteria a field which is becoming of increasing importance in applied decision analysis The final two sections examine uncertain choice in social or group contexts      **Applied Logistic Regression** David W.
