Page,1988-11-25 A practical introduction to symbolic computing and denotational programming First part of the book covers programming Second part addresses symbolic computing in such areas as game playing language translation and theorem proving For each topic there are example problems with proposed solutions followed by working programs using the techniques presented earlier in the

text Two programs using a denotational approach accompany each of the applications in symbolic computing one in Lisp and one in Prolog *Design and Implementation of Symbolic Computation Systems* Alfonso Miola,1995 **All Introduction to Symbolic Computation** Benedict Du Boulay,1979 Advances in the Design of Symbolic Computation Systems Alfonso Miola,1997-03-27 Considers methodological aspects related to design and implementation of symbolic computation systems This volume describes the proposed treatment of mathematical objects via techniques for method abstraction structures classification and exact representation the programming methodology which supports the design and implementation issues

Symbolic Computation Robert Grossman,1989-01-01 This is a monograph that describes current research efforts in the application of symbolic computation to several areas including dynamical systems differential geometry Lie algebras numerical analysis fluid dynamics perturbation theory control theory and mechanics The chapters which illustrate how symbolic computations can be used to study various mathematical structures are outgrowths of the invited talks that were presented at the NASA Ames Workshop on The Use of Symbolic Methods to Solve Algebraic and Geometric Problems Arising in Engineering More than 100 people participated in the two day conference which took place in January 1987 at the NASA Ames Research Center in Moffett Field California The field of symbolic computation is becoming increasingly important in science engineering and mathematics The availability of powerful computer algebra systems on workstations has made symbolic computation an important tool for many researchers *Numerical and Symbolic Computation* Maria Amélia Ramos Loja,Joaquim Infante Barbosa,2020 This book is a comprehensive set of articles reflecting on the application of symbolic and or numerical computation in a range of scientific areas within the fields of engineering and science These articles constitute extended versions of communications presented at the 4th International Conference on Numerical and Symbolic Computation SYMCOMP 2019 that took place in Porto Portugal from 11 to 12 April 2019 The different chapters present diverse perspectives on the existing effective connections between mathematical methods and procedures and other knowledge areas The intrinsic multidisciplinary character is visible throughout the whole book as a result of the applicability of the scope and the applications considered The reader will find this book to be a useful resource for identifying problems of interest in different engineering and science areas and in the development of mathematical models and procedures used in the context of prediction or verification computational tools as well as in the aided learning teaching context This book is a must read for anyone interested in the recent developments and applications of symbolic and numerical computation for a number of multidisciplinary engineering and science problems Design and Implementation of Symbolic Computation Systems John Fitch,1993-09-02 DISCO 92 was held on the Newton Park campus of Bath College of Higher Education England April 13 15 1992 Beside the formal lectures dedicated to design and implementation issues of computer algebra there were several software demonstrations and an opportunity for system designers to compare systems This volume presents the

proceedings of the conference It contains 18 papers on a variety of design and implementation issues One general theme which clearly emerges is the need for interconnections between systems as no one systems incorporates all the facilities that users want Various efforts are being made to design such links but generally in limited contexts such as the Maple project or the Posso project

Symbolic Software for Interactive Descriptions of Dynamic Systems G. Paul Wilhelmij, 1991 By G Paul Wilhelmij *Design and Implementation of Symbolic Computation Systems* Alfonso Miola, 2014-01-15 Symbolic and Numerical Computation for Artificial Intelligence Bruce R. Donald, Deepak Kapur, Joseph L. Mundy, 1992 Over the last decade there has been considerable progress in investigating methods of symbolic mathematics in many application areas of computer science and artificial intelligence such as engineering design solid and geometric modelling robotics and motion planning and machine vision This research has produced few applications within engineering and robotics because of the combinatorial cost of symbolic techniques Therefore it is essential to investigate approaches for systematic integration of symbolic with numerical techniques which are efficient for handling the huge amount of data that arises in practical applications while at the same time maintain a logically consistent solution framework Symbolic and Numerical Computation for Artificial Intelligence gives an overview of applications in machine vision robotics and engineering design where there is a need for integrating symbolic and numerical methods It also illustrates the case for an integrated symbolic and numerical environment to support the needs of these applications This book will be essential reading for researchers in applied mathematics symbolic and algebraic manipulation and applied artificial intell
