Software Development for SAP R/3® Ulrich Mende,2012-12-06 The use of commercial standard software is increasing in importance throughout the world With its R 3 product SAP AG has brought the package on the market that provides the most comprehensive functionality When standard solutions are used there is a priori a conflict of aims between what the standard offers and the company specific requirements SAP counters this in the R 3

System by building a modular software that can be customized to meet the customer requirements. However, many users still see themselves forced to make in-house developments to various degrees to fit the R/3 System. Here they can use the ABAP Workbench that SAP supplies with every system. The present book targets those persons who need to perform these customer-oriented supplementary developments. It leads the reader through the fundamentals of software development within the R/3 System using the ABAP Workbench. These principles differ from other development environments in particular through their complexity and the close integration with the R/3 System. Because an installation for testing and training purposes on the PC at home is not an option, I considered a structured, understandable introduction to the material in the form of a book. If you initially read the book offline from an R/3 System, you will find it to be more important.
