Agbinya, Oya Sevimli, Sam Reisenfeld, 2022-09-01 Broadband communications has become the major focus for industry for offering rich multimedia IP services in next generation networks This book deals with the state of the art and the underlying principles of key technologies which facilitate broadband telecommunications including millimetre wave gigabit Ethernet terahertz communication multiple input multiple output MIMO technology orthogonal frequency division multiplex OFDM ultra wideband UWB and the fourth generation 4G network technologies The book illustrates the use of these technologies including high resolution three dimensional millimetre wave radar imaging and terahertz imaging techniques Within the next few years advances in graphic rendering and the application of millimetre wave radar technology will enable high resolution radar surveillance and operators of industrial processes to control their machines and to navigate remotely even in poor visibility environments The principles and performance of terahertz imaging are also demonstrated in this important book The performance and success of emerging all IP networks depend largely on the efficiency of broadband technologies and this book provides the basis for 4G networks and explores key performance measures such as quality of service and handover between distributed networks mobile and fixed The book also demonstrates the medical and biomedical applications of broadband wireless communications Advances in

Communication and Networking Laurence Tianruo Yang, Jong Hyuk Park, Thanos Vasilakos, Sang-Soo Yeo, 2009-11-02 As computational science and engineering CSE become specialized and fragmented it is easy to lose sight that many topics in CSE have common threads and because of this advances in one sub discipline may transmit to another The presentation of sults between different sub disciplines of CSE encourages this interchange for the advancement of CSE as a whole Of particular interest is the hybrid approach of c bining ideas from one discipline with those of another to achieve a result that is more significant than the sum of the individual parts Through this hybrid philosophy a new or common principle can be

Application of Web Service Technologies on a B2B Communication Platform by Means of a Pattern and UML Based Software Development Process Arnd Schnieders, 2003-09-29 Inhaltsangabe Abstract

There are about 230 000 establishments in the Spanish hotel restaurant and catering industry accounting for a turnover of about 15 6 thousand million euros All of them sell food to private consumers On the other hand suppliers and traders supply the catering trade with food and beverage products Usually the different players in this food distribution network trade products by means of orders which are placed manually This is a process which can be enhanced through the application of computer and Internet technology A project lately also supported by the Spanish government is supposed to fill this gap This project is called Catanet and has been established three years ago Actually the Catanet platform is used by more than 100 customers amongst them very important industry players like Lauren Films Pepsi Unilever and Nestle Some of them will carry out a significant part of their overall food orders by the Catanet platform which corresponds to a turnover volume of many million euros In the former version of the Catanet platform clients had to apply a web page based interface in order to use the Catanet services As this approach prohibited the full exploitation of the benefits the use of computer assistance provides e g human participation still constitutes an inevitable and crucial part of the transaction the interaction is completely asynchronous an additional level is being added to the Catanet platform eliminating these shortcomings During the time of this work the number of Catanet customers has grown explosively increasing also the diversity of the customer s computer systems Additionally new subprojects could be launched due to the acquisition of a government grant These encompassed among others new value added services demanded by the customers like an instant messaging module and a module for the automatic update of the local product catalogue The characteristics of the IT infrastructure of the new customers which will carry out transactions with a serious turnover via the Catanet platform and the necessity to integrate the new subprojects required an adaptation of the design of the platform prototype which had been developed by this time and which is described in this work Within this context the decision has been done to use NET Framework based programs on the customer side instead of Java which had been used so far The reasons for this were besides the easier integration with the IT
